Highest-grade intersection obtained so far

Eloro Resources released highly encouraging results from several additional diamond drill holes at its flagship Iska Iska silver-tin polymetallic complex in the Bolivian Potosi Department, where drilling has identified a large mineralized caldera system. In our view, Eloro Resources made good progress with defining the mineralization at Iska Iska, which appears to be on the verge of outlining a significant NI 43-101 compliant mineral resource. We believe continued positive exploration results from the company's drill programs at its Iska Iska target should help lift the stock again and are reiterating our Buy rating for Eloro Resources and our fully diluted price target of CAD 15.30 per share, derived from an in-situ valuation of Iska Iska's Santa Barbara Breccia Pipe adjusted by the increase in the number of shares outstanding.

Significant drilling results

The recent drill program tested targets from the Santa Barbara adit and the NW extension in the Santa Barbara Mineral Resource Target Area. Highlights from the batch of assays include higher-grade sections of (1) 507.64g Ag eq/t (119.36g Ag/t, 0.14g Au/t, 0.57% Pb and 0.52% Sn) over 49.55m and (2) 401.81g Ag eq/t (31.46 g Ag/t, 0.19 % Pb and 0.61 % Sn) over 28.58m. We note that the reported metal factors are the highest reported to date from the diamond drill program at Iska Iska. With a potential strike length of 4km and a thickness of 2km, expanding to a depth 1km (see also exhibit 2), Iska Iska could be one of the largest silver-tin discoveries in Bolivia in recent history, according to our view.

Further exploration planned

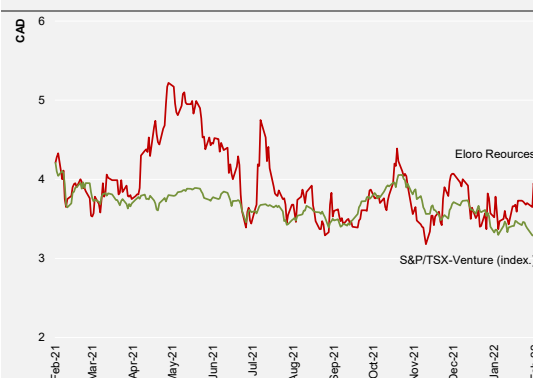

With more than 4,600m completed since the restart last month, for an overall total of 45,779m in 81 drill holes, drilling productivity continues to be high. Eloro resources furthermore announced that underground drilling will be completed soon and exchanged for a high capacity surface rig which will further increase production. Given that approximately 1,500 samples await drill core analysis at laboratories in Lima and Galway, we expect more regular news flow going forward, since both Covid impacted laboratories seem to return to normal productivity.

Upcoming catalysts

We expect continued positive news flow from Eloro Resources mainly from (1) an additional 11 holes totalling 7,859m that have been completed where assay results are still pending, (2) additional underground drilling at the Santa Barbara deposit to test the major magnetic anomaly to the southwest, (3) a series of surface holes testing the southern Santa Barbara target area by using a third surface diamond drill, and (4) the testing of a major magnetic anomaly in the Porco area.

Eloro Resources is a Canadian-based exploration and development company that controls a portfolio of high-grade gold and silver projects in mostly stable jurisdictions in Bolivia, Peru, and the Canadian province of Québec. Eloro Resources states that it has recently intersected very encouraging silver, gold, and base metals mineralization at its most valuable Iska Iska flagship property in Bolivia – a stable mining jurisdiction in close proximity to world-class polymetallic mines and mineral deposits like the world’s largest silver deposit Cerro Rico de Potosí, attracting increasing interest from major miners.

Overview of the assets

With a portfolio of gold, silver, and base metal properties in Bolivia, Peru, and Québec, we regard Toronto-based Eloro Resources as a promising resource exploration and development company. Currently, the investment portfolio of the company consists of the following assets:

- ⑤ Eloro Resources’ undoubtedly most valuable asset at present is the **Iska Iska** property in the Potosí region in the prolific Southern Mineral Belt of Bolivia. In close proximity to world-class polymetallic mines and mineral deposits operated by Sumitomo and Pan American Silver, Iska Iska is a polymetallic deposit, where (genetically determined) several metal phases are found in the ore – in addition to silver mainly zinc, lead, gold, copper, bismuth, tin, and indium. With an area of approximately 900 hectares, the road-accessible and royalty-free property benefits from a well-developed infrastructure, being located 50 kilometres from high voltage powerlines and 48 kilometres by unpaved road to the township of Tupiza. Recent drilling has confirmed surface geological mapping and interpretation of ASTER satellite data which suggested a 400 m diameter breccia pipe (Santa Barbara Breccia Pipe) with a further 100 m wide mineralized envelope around the pipe. The metals discovered are precisely those (Ag, Zn, Pb, Cu, Sn, In, Bi and Cd) that would ideally be discovered in a prolific "Potosí-type" deposit. In our view, Iska Iska has a strong potential for a polymetallic medium to high grade deposit.
- ⑤ In October 2020, **nine additional mining properties** in the Potosí region were each acquired at 100%, one of them is directly adjacent to Iska Iska. The total area of the acquired mining areas amounts to 311.75 square kilometres.
- ⑤ Eloro Resources also holds an 82% interest in the **La Victoria** gold and silver project, an 89.3 square kilometre property located in the north-central mineral belt of Peru, approximately 50 kilometres south of Barrick’s Lagunas Norte gold mine and Pan American Silver’s La Arena gold mine, two well-known low-cost gold producers. La Victoria consists of eight mining concessions and eight mining claims. According to company data, the property has good infrastructure with access to roads, water, and electricity and is located at an elevation of 3,150 m to 4,400 m above sea level.
- ⑤ In addition, Eloro Resources holds a **portfolio of gold and base metal properties** in northern and western Québec in the highly prospective and under-explored, La Grande and Eastmain Greenstone Belts.

Statements pursuant to § 85 (1) WpHG and Article 20 of Regulation (EU) No 596/2014 and Delegated Regulation (EU) 2016/958:

This publication is based on information obtained from carefully selected public sources, especially suppliers of financial data, the publications of the analysed company and other publicly available media.

Rating principles/Methodology/Risks

For the preparation of the publication, company-specific methods from the fundamental stock analysis were used, such as quantitative statistical methods and models, and practices used in technical analysis (inter alia, historical valuation models, net asset value models or sum-of-the-parts valuation models, discounted cash flow models, economic profit models, multiplier models or peer-group comparisons). Valuation models are dependent on macroeconomic factors such as currencies, interest rates, commodities and on assumptions about the economy. In addition to that, market sentiment and political developments may impact the valuation of companies. Selected approaches are also based on expectations, which may change depending on the industry-specific developments without warning. Consequently, recommendations and price targets based on these models may change accordingly. Investment recommendations cover a period of twelve months and may be subject to market conditions. The expected price developments can be achieved faster or slower or be revised upwards or downwards.
