Highest and most extensive silver grades intersected

Eloro Resources announced assay results from eight more diamond drill holes from its drilling programme at the Iska Iska silver-tin polymetallic project in the Potosi Department, South Bolivia. With consistent high silver grades averaging 69.80g Ag/t over a length of 325.48m in drill hole DHK-27, intercepts and grades continue to be highly remarkable in the Santa Barbara deposit, in our view. In addition, Eloro could outline a second, potential world-class tin deposit below the Iska Iska porphyry, extending into the newly acquired Mina Casiterita property. With this, news flow should remain strong, since the company is preparing, after 84,495m in 122 holes drilled, to resume diamond drilling in early February and is going to publish the inaugural mineral resource estimate for Santa Barbara by the end of Q1/2023e. We therefore reiterate our Buy rating for the shares of Eloro Resources and our fully diluted share price target of CAD 16.20, derived from an in-situ valuation of Iska Iska's Santa Barbara Breccia Pipe.

Highest and most extensive silver grades intersected

Eloro Resources again reported remarkable assay results from eight additional diamond drill holes at the silver-tin polymetallic Iska Iska project in southern Bolivia. The silver grades reported in drill hole DHK-27 were the highest and most extensive intersected to date in the Santa Barbara deposit. According to the company, 50% of this 860m drill hole returned reportable intersections with mineralization intercepts averaging 172.09g Ag eq/t (equivalents per tonne). One drill hole (DHK-27) intersected 202.43g Ag eq/t over 325.48m including a higher grade portion of 395.98g Ag eq/t over 109.60m.

Volume of the high grade zone more than doubled

Not only did Eloro Resources report multiple reportable intersections, the definition drilling has also more than doubled the volume of the high grade zone (defined as grading greater than 90g Ag eq/t) to approximately 880mn m³ from 369mn m³ (for details see table 1). In addition, the zone is open to the south, west, and northwest as well as at depth, according to the company, with magnetic inverse modelling and limited depth drilling indicating that the largest tin porphyry is probably below the Iska Iska porphyry.

SOURCE: COMPANY DATA

Eloro Resources is a Canadian-based exploration and development company that controls a portfolio of high-grade gold and silver projects in mostly stable jurisdictions in Bolivia, Peru, and the Canadian province of Québec. Eloro Resources states that it has recently intersected very encouraging silver, gold, and base metals mineralization at its most valuable Iska Iska flagship property in Bolivia – a stable mining jurisdiction in close proximity to world-class polymetallic mines and mineral deposits like the world's largest silver deposit Cerro Rico de Potosí, attracting increasing interest from major miners.

Overview of the assets

With a portfolio of gold, silver, and base metal properties in Bolivia, Peru, and Québec, we regard Toronto-based Eloro Resources as a promising resource exploration and development company. Currently, the investment portfolio of the company consists of the following assets:

- ⑤ Eloro Resources' undoubtedly most valuable asset at present is the **Iska Iska** property in the Potosí region in the prolific Southern Mineral Belt of Bolivia. In close proximity to world-class polymetallic mines and mineral deposits operated by Sumitomo and Pan American Silver, Iska Iska is a polymetallic deposit, where (genetically determined) several metal phases are found in the ore – in addition to silver mainly zinc, lead, gold, copper, bismuth, tin, and indium. With an area of approximately 900 hectares, the road-accessible and royalty-free property benefits from a well-developed infrastructure, being located 50 kilometres from high voltage powerlines and 48 kilometres by unpaved road to the township of Tupiza. Recent drilling has confirmed surface geological mapping and interpretation of ASTER satellite data which suggested a 400 m diameter breccia pipe (Santa Barbara Breccia Pipe) with a further 100 m wide mineralized envelope around the pipe. The metals discovered are precisely those (Ag, Zn, Pb, Cu, Sn, In, Bi and Cd) that would ideally be discovered in a prolific "Potosí-type" deposit. In our view, Iska Iska has a strong potential for a polymetallic medium to high grade deposit.
- ⑤ In October 2020, **nine additional mining properties** in the Potosí region were each acquired at 100%, one of them is directly adjacent to Iska Iska. The total area of the acquired mining areas amounts to 311.75 square kilometres.
- ⑤ Eloro Resources also holds an 82% interest in the **La Victoria** gold and silver project, an 89.3 square kilometre property located in the north-central mineral belt of Peru, approximately 50 kilometres south of Barrick's Lagunas Norte gold mine and Pan American Silver's La Arena gold mine, two well-known low-cost gold producers. La Victoria consists of eight mining concessions and eight mining claims. According to company data, the property has good infrastructure with access to roads, water, and electricity and is located at an elevation of 3,150 m to 4,400 m above sea level.
- ⑤ In addition, Eloro Resources holds a **portfolio of gold and base metal properties** in northern and western Québec in the highly prospective and under-explored, La Grande and Eastmain Greenstone Belts.

Statements pursuant to § 85 (1) WpHG and Article 20 of Regulation (EU) No 596/2014 and Delegated Regulation (EU) 2016/958:

This publication is based on information obtained from carefully selected public sources, especially suppliers of financial data, the publications of the analysed company and other publicly available media.

Rating principles/Methodology/Risks

For the preparation of the publication, company-specific methods from the fundamental stock analysis were used, such as quantitative statistical methods and models, and practices used in technical analysis (inter alia, historical valuation models, net asset value models or sum-of-the-parts valuation models, discounted cash flow models, economic profit models, multiplier models or peer-group comparisons). Valuation models are dependent on macroeconomic factors such as currencies, interest rates, commodities and on assumptions about the economy. In addition to that, market sentiment and political developments may impact the valuation of companies. Selected approaches are also based on expectations, which may change depending on the industry-specific developments without warning. Consequently, recommendations and price targets based on these models may change accordingly. Investment recommendations cover a period of twelve months and may be subject to market conditions. The expected price developments can be achieved faster or slower or be revised upwards or downwards.
