Placement of a convertible bond and LOI for a capital increase

We reiterate our Buy rating for SunMirror and increase our fully diluted price target to EUR 174.30 per share from EUR 68.90 on lower discount rates and a strong raise in peer group multiples. We see additional short- and medium-term upside potential, should the management decide for a trade sale of its most valuable mineral reserve, Cape Lambert South, to a strategic investor or succeed in exploiting that asset in a capital-efficient manner. Additional upside to our price target could arise, should the company use the proceeds from the capital increase for acquiring further strategic mineral assets significantly below market values.

Placement of a convertible bond

Last week, SunMirror announced the issuance of convertible bonds with a nominal value of USD 10.0 million. With a conversion price of CHF 70 per share, the convertible bonds entitle their holders to acquire 133,305 bearer shares with a par value of CHF 1.00. According to the management, the convertible bonds which will run until 30 May 2022 have been fully allocated. The net proceeds will be used for general operational purposes, for the expansion of the company's portfolio and business activities in tier-one jurisdictions, namely in Australia and Europe, according to company information.

Letter of intent to subscribe capital increase

In addition, SunMirror has received a letter of intent from Barracuda Group to subscribe to 1 million new shares from a capital increase in a private placement. Similar to the convertible bond, the subscription price of the shares is CHF 70, excluding subscription rights of current shareholders. According to the company, the proceeds from the capital increase will be used for an expansion of the current portfolio and business activities in tier-one jurisdictions.

Increase of the company value, reiterating our Buy rating

We value SunMirror by using a proprietary sum-of-the-parts valuation of the three mineral assets (primary valuation method). Eliminating our previous discounts which reflected the low transparency of the company's business model and applying up-to-date peer group multiples, we calculate a sum-of-the-parts value of EUR 216.9 million (previously EUR 78.4 million) which translates into an equity value of EUR 174.30 per share (based on 1.244 million outstanding shares, fully diluted count of the convertible bonds but excluding the shares from the capital increase which has not yet been executed). Given the strong share price performance following our initiation report published in September 2020 with a price of EUR 1.70 per share, our new price target represents a further share price performance of 11.7%. We reiterate our Buy rating for the shares of SunMirror AG.

We value the equity of the Dusseldorf Stock Exchange-listed junior mining investment company SunMirror AG using a Net Present Value (NPV) and peer group multiple based sum-of-the-parts valuation of the existing mineral projects. Our sum-of-the-parts valuation of the three assets calculates an equity value of EUR 216.9 million or EUR 174.30 per share for SunMirror.

Growth assumptions

Given the cash flow characteristic of the Cape Lambert royalty asset, our assessment indicates that, coupled with our assumed exploration scenario, a long-term standardized net present value (NPV) model is the most suitable valuation method for this asset. Given the risk of the project we apply a 12% discount rate. For the valuation of the two remaining assets Moolyella (lithium) and Kingston-Keith (gold), we use peer group multiples.

In valuing SunMirror, we did not model any further acquisitions.

In our sum-of-the-parts valuation model, we made the following long-term growth assumptions:

- ☉ **Cape Lambert's** project valuation is solely based on royalty schemes the company intends to generate. We expect production to begin by the year 2023e with an initial production volume of 37.5 million tonnes, which should increase to 75 million tonnes per year in 2024e. We have assumed royalties of AUD 0.50 per ton (EURAUD 1.5516), which translates into annual licence revenues of approximately EUR 24.2 million for the period 2024e-2038e. These revenues have been discounted using a discount rate of 12.0%.
- ☉ **Kingston-Keith** is expected to have an exploitation time of 30 years, starting in 2028e and ending in 2048e. Total gold reserves are estimated to be 35 million tonnes. Peak revenues are expected to be EUR 41.3 million, after considering smelter margins of 8.0%, peak net revenues should be 38.0 million. We have assumed a total mining volume of 1,750 tonnes per year, a strip rate of 0.14, and average gold intercepts according to the valuation report of 4.00 g per ton. Average extraction rate should be 90.0% and we have assumed an average gold price of 1,750 USD per ounce in our calculations.
- ☉ **Moolyella's** lithium exploitation is expected to begin in 2027e. From 2029e onwards, we expect annual revenues of approximately EUR 5.5 million. This assumption is based on 1.00% average lithium oxide (Li₂O) intercepts according to the existing evaluation report and an average lithium price of USD 7.50 per kilogram (EURUSD 1.2005 assumed).

Our forecasts are based on the current group of companies consolidated; we did not consider additional acquisitions by SunMirror.

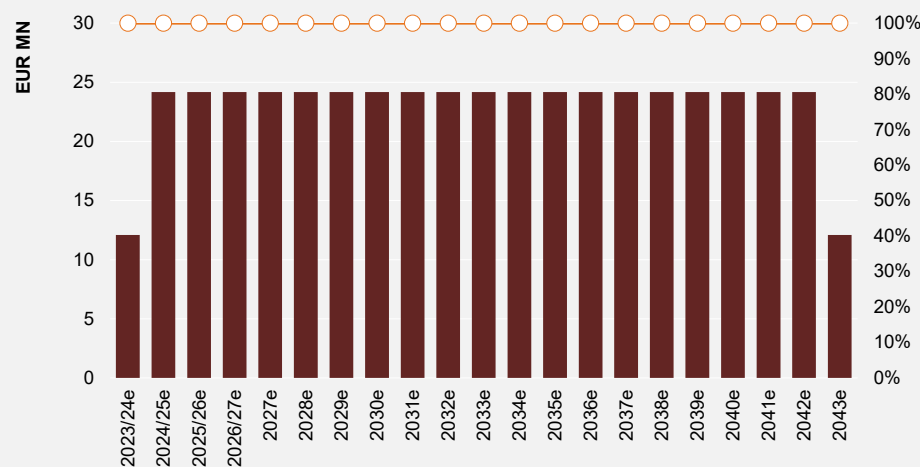

Valuation of Cape Lambert (royalty)

Applying a 12% discount rate (base-case scenario), our discounted cash flow model indicates a present equity value of EUR 136.2 million.

Equity value of EUR 109.50 per share (base-case-scenario).

At 1.244 million shares, this corresponds to an equity value of EUR 109.50 per SunMirror share.

Expanded scenario analysis using alternative discount rates

In the following Table 1, we have applied different discount factors ranging from 7% (best-case-scenario) to 17% (worst-case-scenario). Our findings indicate that equity values of under EUR 108.8 million and over EUR 227.7 million, or under EUR 87.40 and over EUR 183.00 per share, are not to be attained by variations of the discount factor.

Simulation with share price estimates between EUR 87.40 (17% NPV worst-case-scenario) and EUR 183.00 (7% NPV best-case-scenario) per share.

Valuation of Kingston-Keith (gold)

We calculate the value of Kingston-Keith based on the management's expectations of the mineral reserves of this asset by using peer group multiples. In our peer group, we have included Australian junior gold explorers with market caps similar to that of SunMirror. It should be noted that there is no JORC compliant resources and reserves report available for SunMirror; the results should therefore be treated with caution.

Valuation of Moolyella (Lithium)

We calculate the value of the Moolyella Lithium asset based on management's expectations of the mineral reserves of this asset by using global Lithium explorers. As in the case of Kingston-Keith, there is no resources and reserves report available by SunMirror; the results should therefore be treated with caution. In addition, no long-term offtake agreement is in place.

Challenges using peer group methodology

The peer group valuation method allows the value estimated for a mining project to be benchmarked against other mining projects which are already established in the market. The methodology thus is a central tool for ensuring that value estimates are in line with what the market would actually pay for a project.

Notwithstanding, the peer group methodology has substantial challenges when valuing SunMirror:

- ⑤ There is **no true comparable** in the mining industry, since each property is unique with respect to key factors such as geology, mineralization, costs, and stage of exploration. From this it follows that subjective judgment is needed to identify similar properties.
- ⑤ There is only a **limited number of transactions** for mineral properties.
- ⑤ There is a high importance of the **effective valuation date**, since the value of a property will vary widely from day to day, because of the volatility of mineral prices.

After the capital increase, the share capital of SunMirror will comprise CHF 2.0 million or 2,000,000 bearer shares (basic count) at a par value of CHF 1.00 per share. The company's principal shareholders are six companies which together hold 71.2% of the shares. As of April 2021, the free float of the share is 28.8%.

2.0 million outstanding shares (basic count, post capital increase)

After the successful execution of the capital increase, SunMirror's share capital of CHF 2.0 million will be composed of 2.0 million shares with a par value of CHF 1.00 per share (basic count). The largest individual shareholder of the company with an interest of 20.0% is Starpole Investments Ltd., followed by Gravner Ltd. with 18.3%. Other known institutional investors are Seras Capital Finance Ltd. (9.9%), Zero Carbon Ltd. (9.6%), and Lionel PTE Ltd. (5.6%). No other institutional investors holding more than 3.0% of SunMirror's share capital are known at this time.

Statements pursuant to § 85 (1) WpHG and Article 20 of Regulation (EU) No 596/2014 and Delegated Regulation (EU) 2016/958:

This publication is based on information obtained from carefully selected public sources, especially suppliers of financial data, the publications of the analysed company and other publicly available media.

Rating principles/Methodology/Risks

For the preparation of the publication, company-specific methods from the fundamental stock analysis were used, such as quantitative statistical methods and models, and practices used in technical analysis (inter alia, historical valuation models, net asset value models or sum-of-the-parts valuation models, discounted cash flow models, economic profit models, multiplier models or peer-group comparisons). Valuation models are dependent on macroeconomic factors such as currencies, interest rates, commodities and on assumptions about the economy. In addition to that, market sentiment and political developments may impact the valuation of companies. Selected approaches are also based on expectations, which may change depending on the industry-specific developments without warning. Consequently, recommendations and price targets based on these models may change accordingly. Investment recommendations cover a period of twelve months and may be subject to market conditions. The expected price developments can be achieved faster or slower or be revised upwards or downwards.
