Environment

- Climate protection is one of the most important issues for Deutsche EuroShop. We believe that sustainability and profitability, the shopping experience and environmental awareness are not opposing forces. Long-term thinking is part of our strategy. This includes playing our part in environmental protection.
- In 2012, all our German shopping centers had contracts with suppliers that use regenerative energy sources such as hydroelectric power for their electricity needs. The “EnergieVision” organisation certified the green electricity for our centers in Germany with the renowned “ok-power” accreditation in 2012. We plan to switch the centers in other countries to green electricity as well in the next few years.
- The German centers used a total of around 69.2 million kWh of green electricity in 2011. This represented 100% of the electricity requirements in these shopping centers. As a result, based on conservative calculations this meant a reduction of around 25,800 tonnes in carbon dioxide emissions – this equates to the annual CO₂ emissions of around 1,170 two-person households. We have already reduced the energy consumption of our shopping centers by using heat exchangers and energy-saving light bulbs.
- Deutsche EuroShop, through its shopping centers, also supports a range of activities at local and regional level in the areas of ecology, society and economy.
