## Ladies and Gentlemen,

Deutsche Familienversicherung was able to continue its success story in the first half of 2019: for all targets it has set itself, Deutsche Familienversicherung is on schedule to achieve its objectives. The growth of Deutsche Familienversicherung is not only uninterrupted – but it has accelerated significantly compared to the previous year.

With the successful IPO of Deutsche Familienversicherung on 4 December 2018, the company managed to strengthen its equity base by 51.5 million euros. This enabled Deutsche Familienversicherung to invest additional funds in new business, which is growing dynamically. In light of this, the 2018 target with 50,000 new policies – a target which was slightly exceeded by the end of 2018 – has been doubled for the current year. The target for 2019 is thus the acquisition of 100,000 new policies, which corresponds to approximately the same number of new customers.

As of the end of both the first quarter as well as the first half-year of 2019, the pro rata temporis target of 50 per cent (by number) was achieved, and even exceeded in terms of premiums.

Another objective was to increase the share in new business made up by property insurance from 3 per cent in the previous year to 10 per cent. In particular the modernisation of existing property insurance products and the introduction of pet health insurance products made contributions in this regard. Since May 2019, pet health insurance policies have been successfully marketed via the DRTV sales channel and have already contributed to growth in the first half of 2019.

In addition to the ongoing advancement of digitisation, outsourcing of the IT infrastructure is also in the spotlight for 2019. The groundwork required has already been completed and the realisation began in the first half of the year, and the multistage process is expected to continue on into 2020.

Capital investment at the company has undergone foundational restructuring so that the revenue targets can once again be realised following losses in the previous year. You can find additional information about this in the consolidated management report and the notes.

In the second half of 2019, our focus will be on keeping the company on its successful course and continuing the well-above-average growth, carrying out a selective expansion of the product family and further improving our customer service.

Overall, Deutsche Familienversicherung is on its way to achieving all its objectives and – as an insurance company fit for the digital age – is continuing its success story as the sole operational insurance technology company in Germany.

Warm regards,

Dr Stefan M. Knoll  
Chairman of the Executive Board (CEO)

Frankfurt, 13 September 2019

# **CONSOLIDATED MANAGEMENT REPORT**

# CONSOLIDATED MANAGEMENT REPORT

## 1 ECONOMIC ENVIRONMENT AND SECTOR DEVELOPMENT

In the first half of 2019, the economic environment was characterised by a slowdown in economic growth – or rather growth forecasts – stagnating or even deflating inflation data as well as continued major political uncertainty.

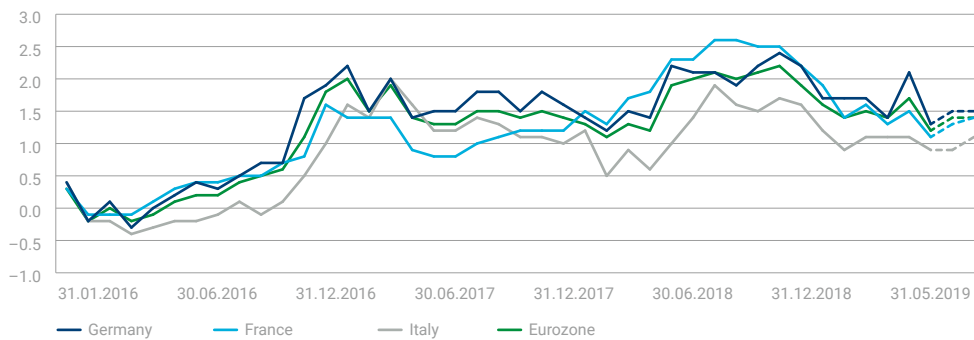

In its most recent forecast, the European Commission predicts growth in GDP within the eurozone of 1.2 per cent, which puts the expectation 0.7 percentage points below the forecast from February of this year. For Germany, the commission lowered its growth forecast from 1.1 to now only 0.5 per cent. Economic growth in the eurozone is supported primarily by domestic demand, whereas the continued political uncertainty and the resurgence of global trade obstacles are weighing on the German economy, which is traditionally export-heavy.

GROSS DOMESTIC PRODUCT IN PER CENT

Inflation remains at a persistently low level. At 1.3 per cent in June, inflation in the eurozone was well below the level targeted by the European Central Bank of 2.0 per cent. At 1.1 per cent, core inflation as well – i.e. inflation adjusted for energy and food prices – remained at a very low level and even decreased compared to the level of the previous year.

DEVELOPMENT OF INFLATION IN PER CENT

In light of shrinking growth forecasts and sinking inflation expectations, interest rates dropped significantly during the first half of 2019. As a result, the market values of bonds in circulation and the stock markets made sharp gains after having reached their low marks at the end of 2018. In June, the Governing Council of the European Central Bank made it clear that the current prime interest rates would not change until at least the middle of 2020. Additionally, the Governing Council decided – for an indefinite period and even after the time when prime interest rates increase – to use maturing funds for the purchase of new bonds. This expectation – in combination with signals of rapprochement with regard to trade relations, most recently at the G20 summit in Japan – led to new lows for secure investments coupled with considerable rises in stock prices. The yield of ten-year German government bonds therefore sank to –0.33 per cent at the end of the first half-year, despite still having been positive at 0.24 per cent at the end of 2018.

TEN-YEAR GERMAN GOVERNMENT BONDS/DAX

While dropping interest rates had a positive effect on the market values of bond portfolios of insurance companies, the pressure on companies to improve margins increased. Maintaining the long-term ability to meet obligations to insurance companies is more dependent than ever on the company's ability to operate profitably in its core business.

## 2 DEVELOPMENT OF THE COURSE OF BUSINESS

On the whole, the course of business can be characterised as extremely pleasing. In spite of the goal for the 2019 financial year of doubling the budget figures from 2018, signs point to all objectives being achieved. Irrespective of this, Deutsche Familienversicherung is continuing its development process with great enthusiasm with regard to the further structuring of the product portfolio, the optimisation of internal processes, digitisation, customer service and capital investment.

### 2.1 Development of the stock price

Our stock price has dropped slightly since the IPO in December 2018. However, if you compare the development with other companies that also had an IPO around the same time, the stock price for Deutsche Familienversicherung has done well overall.

### 2.2 Development of new business

Over the course of the first half-year, we managed to continue the successful beginning to 2019 with regard to sales. As of 30 June 2019, new business had increased from 17,590 new contracts to 49,105 new contracts (+179.2 per cent) and premiums had increased from 6.536 million euros to 16.360 million euros (+150.3 per cent). We are therefore on schedule for new business, both with regard to new policies as well as new premiums.

The most productive sales channel was once again our online business, with a share of 65.5 per cent, followed by our partnership business with 21.8 per cent. A total of 12.7 per cent is attributable to direct insurance business and business with brokers.

### **2.3 Development of the product portfolio**

We continued the revision of our property insurance products, in particular with the revision of our personal liability insurance. The revision of our legal defence insurance and our combination products will be carried out in the third quarter of 2019.

We successfully introduced our health insurance for pets on 15 May 2019 and, as of 30 June of this year, had already issued 1,000 policies. We are extremely pleased with this very successful introduction of a new product. The introduction of pet health insurance and the revision of our property insurance products are important components in increasing the share of property insurance in our new business.

For the fourth consecutive time, our supplementary dental insurance was honoured as the test winner by Stiftung Warentest in May 2019. Being recognised once again demonstrates in impressive fashion that we are experts in supplementary health insurance.

### **2.4 Outsourcing of infrastructure**

Two significant decisions for the successful expansion of the digital insurance platform of Deutsche Familienversicherung were made at the beginning of 2019: the capability of marketing the insurance platform to third parties as well as the outsourcing of the IT infrastructure and the associated focus on application development for the development of the platform.

The contract for outsourcing the IT infrastructure was signed already in the first half-year and the project was initiated successfully. We are thus always in a position to reflect the realised above-average growth of Deutsche Familienversicherung over the long term and to account for the increasing regulatory requirements. Expansion of the already-high security standards of Deutsche Familienversicherung also comes with this step, because the level of recognition of Deutsche Familienversicherung is constantly growing due to its media presence.

### **2.5 Advancement of digitisation**

The digitisation of Deutsche Familienversicherung is one of the core elements of the company. Although Deutsche Familienversicherung serves as a pioneer in this regard, not all processes have been fully digitised, especially with regard to claims. On the one hand, this is partly due to the still-incomplete technical possibilities, such as the performance level of artificial intelligence. On the other hand, considerable progress has been made through digitisation, especially with regard to customer service.

Some 98 per cent of all new customers actively use the customer portal of Deutsche Familienversicherung. To improve communication with customers, a messenger was developed in the first half of the year and integrated into the portal. This messenger enables our customers to communicate with us easily, conveniently and in accordance with the General Data Protection Regulation (GDPR). Thus we are able to quickly and simply answer all the questions our customers have.

## 3 BUSINESS DEVELOPMENT

### 3.1 Underwriting income

In the first half of 2019, gross premiums increased by 38.6 per cent compared to the previous year – from 30,190,200 to 41,845,700 euros. Supplementary health insurance and the partnership with Henkel – which entered into effect on 1 January – in the field of supplementary long-term care insurance once again contributed to this growth. Furthermore, the successful entry into pet health insurance business in May 2019 is an important step for Deutsche Familienversicherung in the expansion of its portfolio of property insurance products and offers the company additional growth opportunities.

The significant increase in new business is accompanied by the scheduled increase in sales expenses; the increase in premiums was offset by a nearly identical increase in sales-related spending. Deutsche Familienversicherung is also on schedule in this regard as well.

Ceded reinsurance premiums increased compared to the same period in the previous year by 2,823,100 euros, whereby the scheduled repayment of reinsurance cessions was offset by higher premiums in connection with the significant increase in supplementary long-term care business.

Underwriting income therefore developed within the scope of our expectations in the first half of 2019, closing with a loss of 2,961,000 euros (first half 2018: profit of 1,890,000 euros). The reasons for the underwriting loss were significantly higher sales expenses compared to the previous year in connection with the increase in new business.

### 3.2 Capital investment

Stock markets reached their low points for the year at the end of 2018. At the same time, interest rates increased throughout the year, which meant that investors struggled with sinking market values with regard to both stocks and bonds.

While the increase in interest rates was the direct result of the announced end of bond buying by the European Central Bank, worries of investors about recessive tendencies together with political risks as well as continued disputes with regard to worldwide trade relationships led to the German and European stock markets reaching their lowest levels as of the end of the year.

Stock markets made a significant recovery over the course of the first half-year, with the DAX achieving growth of 17.4 per cent in the first six months after having dropped by some 18 per cent over the course of 2018. On the other hand, interest rates fell in light of declining inflation data and the expectation of market participants that the European Central Bank would loosen its monetary policy once again. At the end of 2018, yields for ten-year German government bonds were at 0.24 per cent and dropped to -0.33 per cent by the end of the first half of 2019.

Deutsche Familienversicherung made use of the market development to realise the planned restructuring of its capital investments, which involved the sale of stock and bond portfolios. Deutsche Familienversicherung thus realised profits of 908,000 euros (previous year: loss of 2,656,000 euros). Ordinary revenue of 438,000 euros (previous year: 522,000 euros) was within expectations.

### 3.3 Half-yearly income

In line with expectations, Deutsche Familienversicherung closes the first half of 2019 with a loss of 3,595,000 euros (first half of 2018: profit of 163,000 euros). After offsetting taxes, the after tax loss for the first half of 2019 amounted to 2,756,000 euros (previous year: profit of 12,000 euros).

Sales expenses, which increased significantly compared to the previous year, as well as higher expenses for the company as a whole were countered by vastly improved capital investment income.

### 3.4 Cash flow and liquidity

Deutsche Familienversicherung recorded positive cash flow from operating activities in the first half of 2019 as well. In the first six months of the 2019 financial year, current cash inflows from insurance business amounted to 17,837,000 euros (previous year: 6,625,000 euros).

Cash flow from operating activities was used for the expansion of the capital investment portfolio. In light of the changing framework conditions on capital markets, the timing of individual investment decisions is critical, so Deutsche Familienversicherung gives priority to temporarily building up a higher level of liquidity over the hurried allocation of capital.

### 3.5 Opportunities and risk report

#### 3.5.1 Introduction and description of the risk structure

In its annual report for 2018, Deutsche Familienversicherung reported in detail on its opportunities and risks. The presentation and evaluation of the opportunity and risk situation of Deutsche Familienversicherung remain applicable without change.

The purpose of the company is insurance business, an activity that, by nature, is associated with risk. It is therefore important to take risks in a targeted manner based on the existing ability to bear risks, insofar as the opportunities associated with this allow for the expectation of sufficient added value. Risk management at Deutsche Familienversicherung aims to identify product and contractual risks early on, to monitor them and, ultimately, to manage them in a systematic manner. Active risk management is carried out by the executives and managers. Department heads routinely report to the member of the Executive Board responsible for their department, or the Executive Board as a whole, about the current course of business, including from a risk perspective.

The risk strategy of Deutsche Familienversicherung also includes the transfer of risk to solvent reinsurance companies with very good credit ratings by means of pro rata risk assumption and flexibly expandable cover for major losses and natural catastrophes, as well as annually adjusted insurance cover for loss of revenue or business interruptions, public liability, cyber risks and commercial buildings and inventory.

The entire Executive Board and the Supervisory Board are informed on a rotating basis about the quarterly solvency figures. The solvency ratio of Deutsche Familienversicherung was well above the legal requirements in the first half of 2019.

Deutsche Familienversicherung has an independent risk control unit (IRCU) that is tasked with the continuous, independent and objective implementation and development of the risk management system of the company. The principle of proportionality is applied when designing the IRCU and the risk management system.

The overall risk of Deutsche Familienversicherung can be divided into the following risk categories:

- ◆ Underwriting opportunities and risks
- ◆ Risks from the default of receivables from insurance business
- ◆ Opportunities and risks from capital investments, in particular market risks
- ◆ Operational risks
- ◆ Liquidity risks
- ◆ Reputation risks
- ◆ Strategic opportunities and risks

With its successful IPO on carried out on 4 December 2018, Deutsche Familienversicherung laid the foundation for its further growth. Deutsche Familienversicherung had additional capital inflows in the amount of 6,092,000 euros in the first half of 2019 in connection with the execution of the overallotment ('greenshoe') option.

### **3.5.2 Summary of the risk situation**

In summary, based on the current information and the described conditions, Deutsche Familienversicherung determines that there are no present developments which would endanger the existence of the company or which would significantly hinder the asset, financial and earnings position of the company or its ability to bear risks.

### **3.6 Forecast report**

Deutsche Familienversicherung will continue its growth course in the second half of 2019 as well reaffirms its target of 100,000 new policies. On the basis of the present half-yearly figures and the expectations for the remainder of the year, Deutsche Familienversicherung still expects a pre-tax loss of between 9 and 11 million euros for 2019 as a whole.

# CONSOLIDATED NOTES

## 1 GENERAL INFORMATION

### 1.1 Bases of the report

The condensed consolidated interim financial statements of the DFV Group are presented in accordance with IAS 34 and were prepared in accordance with the International Financial Reporting Standards (IFRS) as adopted by the European Union.

For existing and unchanged IFRS, the accounting, valuation, consolidation and disclosure principles applied to prepare the condensed consolidated interim financial statements are consistent with those applied to prepare the consolidated financial statements for the 2018 financial year. The condensed consolidated interim financial statements should be read in conjunction with the consolidated financial statements of the DFV Group for the 2018 financial year.

Uniform accounting and valuation methods were applied to the reporting and comparative periods, unless prospective method changes were expressly permitted for the year under review. The consolidated financial statements were prepared under the assumption of a going concern. The reporting currency is the euro. The consolidated financial statements are presented in whole euros, which could result in rounding differences.

As part of the IPO, Deutsche Familienversicherung prepared pro forma consolidated financial statements in accordance with IFRS for the 2017 financial year, for which WEDDING & Cie. GmbH Wirtschaftsprüfungsgesellschaft issued an unqualified audit opinion. The accounting and valuation methods of these pro forma consolidated financial statements correspond to those of the consolidated financial statements for the 2018 financial year. To this extent, the previous-year figures presented in the consolidated financial statements for the 2018 financial year refer to these pro forma financial statements.

IFRS 4 (Insurance Contracts), which is currently still applicable for insurance companies, permits the accounting and valuation of underwriting items during a transitional phase, phase I, in accordance with IFRS 4.13, in principle in accordance with the accounting rules applied prior to the introduction of IFRS. Accordingly, DFV Deutsche Familienversicherung AG, in accordance with IFRS 4.25, has applied the national accounting standards applicable to insurance contracts under the German Commercial Code (HGB) and other additional national accounting standards for insurance companies.

The present condensed consolidated interim financial statements of the DFV Group were approved by resolution of the Executive Board on 26 August 2019.

### 1.2 Recently adopted accounting standards (first-time adoption as of 1 January 2019)

#### IFRS 9 – Financial Instruments

These amendments were published in October 2017 and take into account the classification requirements of IFRS 9 for financial assets with negative settlement payments in the event of early repayment. According to the clarification, such assets meet the cash flow conditions. Subject to the EU endorsement still outstanding, the amendments must be applied retrospectively for financial years beginning on or after 1 January 2019. Early application is permitted. The transitional provisions allow certain instances of transitional relief. No effects are expected from this regulation within the DFV Group due to the absence of relevant business transactions.

### **IFRS 16 – Leases**

On 13 January 2016, the IASB published IFRS 16 (Leases), which must be applied from 1 January 2019 onward. DFV will apply the new standard on the prescribed effective date according to the modified retrospective approach. To date, DFV has only entered into operating leases for movable assets such as IT and office equipment. Until now, the payment obligations for operating leases only had to be disclosed in the notes. In future, however, the rights and obligations resulting from these leases must be recognised as assets (right of use for the leased asset) and liabilities (lease liabilities) in the balance sheet. The Group expects this redefinition of a lease to have an impact on the number of items to be recognised as a lease. Exceptions to this are short-term leases with terms of up to 12 months and leases for low-value assets. DFV expects the new regulations to result in a slight increase in the balance sheet total, measured by total assets, at the time of initial application.

In the income statement, the expenses from operating leases have so far been reported in various items in line with the expenses incurred in the various divisions. In future, depreciation on the right of use and interest expenses for leasing liabilities will be reported instead.

In the statement of cash flow, payments for operating leases were previously reported under cash flow from operating activities. In future, they will be divided into interest and principal payments. While interest payments are still reported under cash flow from operating activities, principal payments are allocated to cash flow from financing activities.

According to previous analyses, lessor accounting will remain largely unchanged, with the exception of extended disclosures in the notes.

The transitional provisions contain instances of relief to the effect that a so-called simplified procedure – which does not include full retrospective accounting – can be applied for the first-time application of IFRS 16. An adjustment of the previous year's figures would not be necessary if the simplified procedure were applied. If the simplified procedure is applied, existing policies would not have to be fully reassessed retroactively.

As explained above, the implementation of IFRS 16 is expected to lead to changes in the accounting treatment of lessee relationships in the consolidated financial statements. However, the overall impact on the Group's asset, financial and earnings position is considered to be subordinate.

### **IFRIC 23 – Uncertainty over Income Tax Treatments**

The interpretation was published in June 2017 and must be applied to the recognition of income taxes in accordance with IAS 12 if there are uncertainties regarding the treatment of income taxes. It does not apply to taxes or duties that do not fall within the scope of IAS 12, and does not contain provisions on interest and late-payment penalties associated with uncertain tax treatment. The interpretation requires an entity to decide whether it should assess uncertain tax treatments individually. In addition, assumptions must be made with regard to the review of tax treatments by the tax authorities. In addition, the determination of taxable profit (tax loss), tax bases, unused tax losses, unused tax credits and tax rates are issues of interpretation, as are the consideration of changes in facts and circumstances.

Entities must determine whether to assess each uncertain tax treatment separately or together with one or more other uncertain tax treatments. The approach chosen should be that which allows the best prediction of the resolution of the uncertainty. The interpretation is effective for reporting periods beginning on or after 1 January 2019; however, certain instances of transitional relief may be used. Specific statements on the expected effects of IFRIC 23 cannot be made at the time these consolidated financial statements were prepared.

### **IAS 1/IAS 8 – Presentation of Financial Statements/Accounting Policies, Changes in Accounting Estimates and Errors**

The amendments to IAS 1 and IAS 8, in combination with additional explanations on their application, are intended to sharpen the concept of materiality and, in particular, to facilitate the assessment of materiality for users of IFRS. In addition, the amendments ensure that the definition of materiality is uniform in the IFRS rules and regulations.

### **IAS 19 – Employee Benefits**

The IASB issued the amendments in February 2018, addressing one of the two issues relating to IAS 19 that were filed with the IFRS Interpretations Committee and published as a joint draft in June 2015. The following modifications to plan amendments, curtailments or settlements (amendments to IAS 19) were adopted:

- ◆ In the future, it will be mandatory that in the event of an amendment, curtailment or settlement of a defined benefit plan, the current service cost and the net interest for the remainder of the financial year be recalculated using the current actuarial assumptions used for the required revaluation of the net liability (asset).
- ◆ Furthermore, additions have been made to clarify how a plan amendment, curtailment or settlement affects the requirements for asset value ceilings.

An entity is to apply the changes to plan amendments, curtailments or settlements that begin on or after 1 January 2019. Early adoption is permitted but should be disclosed. The changes relate to future plan amendments, curtailments or settlements.

None of these issues is currently relevant to DFV, so that no effects are foreseeable.

### **IAS 28 – Investments in Associates and Joint Ventures**

These changes were published in October 2017 and they explain that an entity first applies IFRS 9 to financial instruments that are not accounted for using the equity method but are part of a net investment in an associate or joint venture. IAS 28.38 and IAS 28.40–43 are to be applied subsequently. Subject to the EU endorsement still outstanding, the amendments must be applied retrospectively for financial years beginning on or after 1 January 2019. Early application is permitted. The transitional provisions provide for some instances of transitional relief. There are no effects for the DFV.

### IFRS 3 – Business Combinations

Clarification of the business definition in IFRS 3 Appendix B5 ff. The amendment provides guidance to facilitate the distinction between the acquisition of a business and the acquisition of an asset or group of assets. Only the acquisition of a business operation falls within the scope of IFRS 3 and results in the capitalisation of goodwill.

### Improvements to IFRS (2015–2017)

The improvements to IFRS for 2015 to 2017 are an omnibus standard issued in December 2017 that addresses amendments to various IFRS that are effective for annual periods beginning on or after 1 January 2019. The improvements to IFRS contain the following changes:

Since the improvements were not published until December 2017, the analyses of their relevance for DFV have only just begun. To this extent, no statements can yet be made about the expected effects of the improvements on future consolidated financial statements.

- ◆ IAS 12: Clarification regarding the recognition of income tax consequences of financial instruments reported under equity: Tax effects on dividends should be recognised when liabilities for taxes are recognised. The reporting of corporate taxes on dividends is based on the (generally recognised through profit or loss) origination of past transactions that are the basis for the origination of dividends (and not on the reclassification of dividends from equity to liabilities with no effect on profit or loss).
- ◆ IAS 23: From the point in time when an asset is completed or procured for which borrowed capital has been raised and not fully utilised, these borrowing costs are included in the interest rate for general borrowing for other qualifying assets for which no specific borrowing has been raised.
- ◆ IFRS 3/IFRS 11: Clarification of accounting for a change of status from at-equity interests to interests in a joint operation (IFRS 11) and for a change of status from interests in a joint operation to sole control (IFRS 3). In the first case, the previously held shares are not revalued. In the latter case, it is treated as a successive business combination with a revaluation of the shares previously held.

### 1.3 Valuation changes

There were no changes to the valuation methods in the 2019 financial year.

## 2 NOTES TO THE CONSOLIDATED BALANCE SHEET AND STATEMENT OF COMPREHENSIVE INCOME

### 3.2 Disclosures regarding contingent liabilities

As of the balance sheet date (30 June 2019), there were no contingent liabilities in addition to the provisions recognised in the consolidated balance sheet that would have to be reported.

### 3.3 Events after the reporting date

There have been no events of particular significance since the end of the Group financial year that have not been included in either the consolidated income statement or the consolidated balance sheet.

### 3.4 Responsibility statement of the legal representatives

'We assure to the best of our knowledge that – in accordance with the applicable reporting principles for interim financial reporting – the interim consolidated financial statements give a true and fair view of the asset, financial and earnings position of the Group, and the interim management report of the Group includes a fair review of the development and performance of the business and the position of the Group together with a description of the principal opportunities and risks associated with the expected development of the Group for the remaining months of the financial year.'

# REVIEW CERTIFICATE

To DFV Deutsche Familienversicherung AG

We have reviewed the condensed consolidated interim financial statements – comprised of the balance sheet, statement of comprehensive income, statement of cash flow, statement of changes in equity and selected explanatory notes – and the interim management report of DFV Deutsche Familienversicherung AG for the period from 1 January 2019 to 30 June 2019, which are part of the semi-annual financial report pursuant to section 115 of the WpHG (Wertpapierhandelsgesetz – German Securities Trading Act). The preparation of the condensed consolidated interim financial statements in accordance with the IFRS applicable to interim financial reporting as adopted by the European Union and of the interim group management report in accordance with the requirements of the WpHG applicable to interim group management reports is the responsibility of the parent company's management. Our task is to issue a review certificate for the condensed consolidated interim financial statements and on the interim group management report based on our review.

We conducted our review of the condensed consolidated interim financial statements and the interim group management report in accordance with German generally accepted standards for the review of financial statements promulgated by the Institute of Public Auditors in Germany (IDW). Those standards require that we plan and perform the review so that we can preclude through critical evaluation, with moderate assurance, that the condensed consolidated interim financial statements have not been prepared, in all material respects, in accordance with the IFRS applicable to interim financial reporting as adopted by the European Union and that the interim group management report has not been prepared, in all material respects, in accordance with the requirements of the WpHG applicable to interim group management reports. A review is limited primarily to inquiries of company personnel and analytical procedures and therefore does not provide the assurance attainable in an audit of financial statements. Since, in accordance with our task, we have not performed an audit of the financial statements, we cannot issue an audit opinion.

Based on our review, no matters have come to our attention that cause us to presume that the condensed consolidated interim financial statements have not been prepared, in all material respects, in accordance with the IFRS applicable to interim financial reporting as adopted by the European Union, or that the interim group management report has not been prepared, in all material respects, in accordance with the requirements of the WpHG applicable to interim group management reports.
