EASY SOFTWARE AG
SOFTWARE FOR DOCUMENTS

The Company

Since 1990 EASY SOFTWARE has been designing and developing innovative solutions for electronic document and data archiving as well as document and content management. Our successful EASY ENTERPRISE product suite helped us to become a market leader in this industry. EASY ENTERPRISE is deployed in more than 9,000 enterprises throughout the world. EASY software acquires any type of bulk data and/or organizing document flow, ensuring revision-proof long-term archiving and

guaranteeing information and content availability across your organization. So the EASY document management system (DMS) noticeably takes off workload, streamlining business costs. Close cooperation with SAP, IBM and Microsoft ensure that all EASY software solutions are always designed to meet future requirements. EASY SOFTWARE AG has subsidiaries in Austria, the UK, Singapore and the USA, enabling it to continuously expand its international business.

KEY FIGURES (IFRS) OF THE GROUP

<i>Figures in € million</i>	06/30/2008	06/30/2007

Equity capital	13.3	12.6
Equity ratio	65 %	67 %
Employees (half-year average)	171	149

EASY continues to set standards in the IT industry

The market situation of the industry

EASY SOFTWARE AG has been a market leader in the electronic document management sector for years. This continues to be confirmed by independent surveys. In 2008, we also continued to push the necessary developments to not just keep our position but also to expand our technological advantage. Our SAP archiving solution is an example of this. As part of the SAP certification program, EASY SOFTWARE's interface to SAP ArchiveLink successfully passed the required tests in May 2008, currently providing one of the fastest SAP archiving solutions in the world. Processing about 823,000 documents per hour, EASY ENTERPRISE.x clearly is the superior solution in SAP archiving. It was certified on the Windows 2003 Server/SQL Server and AIX/Oracle platforms. The current SAP test has shown again that EASY ENTERPRISE.x fully meets its claim to be one of the leading document management solutions throughout the world. This achievement is the trendsetting criterion in the DMS industry.

With its EASY xSHARE 2007 module, EASY SOFTWARE provides an archiving and document management solution based on EASY ENTERPRISE.x for Microsoft SharePoint Server that is seamlessly integrated both in terms of appearance and configuration. Thus, the performance features of the EASY ENTERPRISE.x archive server, such as revision security, storage connections or compliance, are now also available in the current Microsoft SharePoint product environment. The combination of state-of-the-art technologies enables the user to benefit from improved information management and optimized business processes at significantly reduced cost.

Our leading position in the German markets also facilitates increasing demand for process-oriented overall solutions from European users. Put simply, what will matter in the future will not be only back-end electronic "binding and storing", but the entire process "from the mailroom and invoice verification, accounting, IT, etc. through to storage". This will generate an even greater customer benefit. With its product suite, EASY SOFTWARE is perfectly positioned to meet the requirements for these process solutions.

Business development

In most sectors, the Group's business developments during the first half of 2008 were according to schedule. We were able to increase sales by 11% as compared to the reporting period of the previous year. We started the second half of 2008 with a backlog of orders amounting to €1.6 million.

The performance of EASY SOLUTIONS Archivierungs- und Informationssysteme GmbH in Austria is particularly good news. The company was capable of increasing its sales by 50%, thereby significantly increasing its net income for the period as well.

EASY SOFTWARE (ASIA PACIFIC) PTE. LTD., which was established only a year ago, also shows a positive performance record. With its own well-trained team and already active sales partners, the company won key accounts in the APAC region's trade and finance segment. These references enable driving business during the further course of the business year.

After its considerable losses during the previous year, EASY SOFTWARE (UK) PLC. is moving forward. Although, according to schedule, its net income at the end of the reporting period is still negative, we assume – supported by the already successfully implemented reorganization measures – that it will reach its annual target of achieving a small positive results figure during the second half of the year.

Business development for EASY SOFTWARE INC. in the USA went according to schedule during the first half of the year. It is to expand through intensified sales activities during the second half of the year.

Our internationalization strategy has been successful during the first half of the year under review.

Group structure

Compared to the balance sheet date of December 31, 2007, group structure has not changed.

Sales development

The Group's revenue during the first half of 2008 amounted to €16.4 million (previous year: €14.8 million). The sales increase of 11% is the result of consistent implementation of the defined corporate goals.

Earnings development

The Group's earnings before taxes (EBT/IFRS) amount to €2.5 million (previous year: €2.8 million). The reduction of the income before tax is essentially due to the scheduled costs of investments in personnel, as well as moderate pay rise and increased personnel cost accruals. Moreover, the disproportionate increase in the cost of goods was due, among others, to an increased quota of software maintenance costs for EASY software with a quota of third-party license deployed with customers. The consolidated net income for the period according to IFRS amounts to €2.1 million (previous year: €2.8 million). While as of June 30, 2007 earnings resulted from the increase in deferred tax assets for loss carryforwards amounting to €0.3 million, the result as of June 30, 2008 was burdened with the increase in deferred tax liabilities due to the increase in capitalized software developments amounting to €0.13 million.

Financial and capital structure

The Group's financial and capital structure is also identified by creating liquid assets and by achieving a positive result. Due to business developments, the shareholder's equity increased by €0.7 million from €12.6 million to €13.3 million as compared to the previous year. As of June 30, 2008, the Group's equity ratio is 65% (previous year: 67 %), with a balance sheet total of €20.4 million.

The EASY stock

Starting the financial year 2008 at a price of €6.01, the EASY stock's price at Xetra closed at €4.93 as of June 30, 2008. Thus, the EASY stock's price saw the typical market downturn during the first half of 2008.

THE EASY STOCK AT A GLANCE

	06/30/2008
Annual peak	€ 6.20
Annual low	€ 3.82
Final price as of June 30, 2008	€ 4.93
Equity as of June 30, 2008	€ 5,403,000.00
Number of shares as of June 30, 2008	5,403,000

KEY FIGURES OF THE EASY STOCK

Security code number	563400
ISIN	DE0005634000
Stock symbol	ESY
Share type	Bearer shares (no-par shares)
Market sector	Geregelter Markt, Frankfurt
Indices	CDAX-Software-Performance-Index
Market location	XETRA, Frankfurt, Berlin-Bremen Düsseldorf, Hamburg, Stuttgart

Financial situation

Despite the outflow of funds amounting to €1.8 million gross, resulting from the purchase of the server component of our e-mail archiving module EASY xBASE at the end of December 2007, we were able to keep the level of available liquid assets high at €5.1 million (previous year: €5.5 million) as of June 30, 2008. The bank liabilities that refer only to our subsidiary EASY SOFTWARE (UK) PLC. amount to €2.2 million (previous year: €1.5 million, €2.7 million as of December 31, 2007).

Personnel changes to the Management Board

On April 9, 2008, Mr. Josef Gemeri left the Management Board of EASY SOFTWARE AG.

Employees

During the first half of 2008, the EASY Group employed an average of 171 people (previous year: 149). The increase in the number of employees is the result of investments in domestic and international staff begun during the second half of 2007. These investments help securing the sales to be realized, as well as specific expansion of German and international business.

Opportunities for future development

From our point of view, internationalization strategy in sales with new international partners provide special opportunities for the future development of the EASY Group. Moreover, we recognize new potential for partner sales channels in the sectoral OEM business. By the end of 2007 we had already entered into new and strong OEM partnership alliances which are to contribute to the positive operating result in 2008. More OEM partnership alliances can and should be won in the short and medium term.

In the future, stricter segmentation of our products and solutions for businesses of different sizes is to service more specifically both the respective clientele and the corresponding EASY partner channel. This will help cover the different markets more efficiently. In addition, significant ongoing development and greater real net output ratio are possible in the sector of process-oriented solutions that are in high demand in the market. While issues such as invoice processing are currently in great demand, other essential document-based business processes not yet replicated electronically or replicated only insufficiently and loosely can be replicated in the future.

Risks of future development

Major risks for our company result from the market conditions and competitive environment. Apart from the general economic situation, it is primarily sectoral risks and the rapid technological change that may affect the course of business. Essential influences on future success are the development of marketable products, and a sustainable sales concept. We will meet product risks through constant ongoing development of our products and intensive quality tests prior to delivering a new version, and through extending our training programs to customers, employees, and sales partners. Subject to the economic and sectoral development, there are in particular risks related to sales and earnings that possibly cannot be completely compensated, despite current cost control.

Moreover, the Group faces risks regarding EASY SOFTWARE (UK) PLC. In 2007, EASY SOFTWARE (UK) PLC. sustained a loss; however, although its result at the closing date of this financial report has improved, it is still in the negative. This shows that the initiated measures have had an initial positive impact. Bank guarantees in favor of EASY SOFTWARE (UK) PLC. amount to €2.3 million. The current goodwill amounts to €0.4 million. In case the company should not be able to achieve the expected positive results in the financial year 2008, there are value adjustment risks with respect to the goodwill as well as risks of a potential drawdown with respect to the guarantees given.

We meet these risks with consistent controlling through the Management Board of EASY SOFTWARE AG and with an intensive distribution-related support for the purpose of winning new partners. In view of the initiated measures we assume that these risks can be reduced to a minimum in the current business year. We consider consistent risk management as an instrument for long-term safeguarding of our company. There is an early warning system to identify potential endangerments that includes internal and external risk factors. The respective specialized departments control adherence to the strategic targets. Central audits of corporate ratios, plan variances, process control as well as market and competition analyses round off our risk management.

Where possible, risks that may arise from departing employees are minimized through constant knowledge transfer. The essential risks for the EASY Group are identified and substantiated as well as continually monitored through suitable indicators. A report on this will usually be available every month.

Outlook and future development

The EASY Group continues to be optimistic about the future. Offering top quality products and solutions, we think we will continue to be an international market leader. To us, technological progress and ease of use are not mutually exclusive. Precision, stability and flexibility are the maxims under which we develop "SOFTWARE FOR DOCUMENTS". Customer approval, new cooperation agreements and the successful realization of our strategic corporate goals have demonstrated that we are on the right track.

Customer-oriented, ongoing development of EASY ENTERPRISE.x is the basis for our expanding business of selling one of the most complete and future-proof systems in the market.

Our foreign subsidiaries will continue the path of expansion through partnership alliances.

According to schedule, the sales figure during the second half of the financial year 2008 will be less than during the first half. Due to the development of incoming orders during the first six weeks of the second half of the financial year 2008 and to the current, verified backlog from our sales forecast, the sales figure for the entire financial year 2008 will probably be clearly above that of the previous year (€23.2 million); however, it will be less than the target figure of €27.0 million. The reason for this is the predicted downturn, combined with a slight decrease in investment activity of our customers and prospects. This applies both to end user and partner business. As a side effect, pre-tax return will drop below the target figure, and probably be just under 10%.

Notes to the consolidated financial statement (IFRS)

Conformity of interim consolidated financial statements with IFRS

EASY SOFTWARE's interim consolidated financial statement effective June 30, 2008 has been compiled according to the International Financial Reporting Standards (IFRS) of IASB, taking the interpretations of the International Financial Reporting Interpretations Committee (IFRIC), as applicable in the European Union, into consideration. In addition, the consolidated financial statements comply with the provisions of Section 315a, Paragraph 1 HGB (German Commercial Code). In the preparation of the consolidated financial statement and the determination of the previous year's figures the Company generally applied the same accounting and valuation principles as in the 2007 consolidated financial statement and as of the balance sheet date December 31, 2007.

Scope of consolidation

Besides EASY SOFTWARE AG of Mülheim an der Ruhr as the parent company, the following subsidiaries have been included in the consolidated financial statements, in which EASY SOFTWARE AG directly or indirectly controls the business policy:

<i>Company</i>	Holdings
EASY SOLUTIONS Archivierungs- und Informationssysteme GmbH, Austria	70 %
EASY SOFTWARE (UK) PLC., United Kingdom	76 %
EASY INTERNATIONAL CONSULTING GmbH, Oberhausen	100 %
EASY SOFTWARE INC., USA	100 %
EASY SOFTWARE (ASIA PACIFIC) PTE. LTD, Singapore	100 %

All companies are included in the interim consolidated financial statements using the purchase method, since they are controlled directly or indirectly by EASY SOFTWARE AG.

Consolidation principles and effective staff closing date

The companies included in the Group as of June 30, 2008 according to uniform regulations form the basis of the consolidated interim financial statement.

Intercompany profits, losses, revenues, income and expenses as well as receivables and liabilities between consolidated companies were eliminated.

Currency translation

Currency translation is made in compliance with IAS 21. In the separate interim financial statements of the companies included business transactions in foreign currencies are measured using the rate at the date of initial entry. As of the balance sheet date, monetary items are translated using the closing rate. Exchange gains and losses are recognized in the income statement.

Upon inclusion in the consolidated financial statements, the financial statements of the foreign subsidiaries EASY SOFTWARE (UK) PLC., EASY SOFTWARE INC. and EASY SOFTWARE (ASIA PACIFIC) PTE. LTD. are translated into euros using the functional currency concept as per IAS 21. Since these companies conduct their business independently, the functional currency is the respective local currency.

Accounting and valuation principles

The consolidated financial statements have been prepared in euros; all amounts are stated in thousands of euros (k EUR). The cost method has been applied on principle. In compliance with IAS 27 uniform accounting and valuation principles have been stipulated for all group companies, which have been changed as compared to the previous year only to the extent described above.

Costs for newly developed software products are capitalized at cost of conversion as far as the expenditure can be clearly allocated and both the technical feasibility and the marketability of the newly developed products are guaranteed (IAS 38). Furthermore, the development activity has to result in probable future economic benefits. Costs of conversion comprise the cost directly or indirectly attributable to the development phase. Amortization is made on the basis of the estimated sales period of the software products, currently amounting to three years. In compliance with IAS 38, research expenditures may not be capitalized and are therefore directly recognized as expenditure in the income statement.

Property, plant and equipment are measured at cost reduced by scheduled depreciation.

Under inventories, product licenses and merchandise are recognized at cost.

Trade receivables, other receivables and cash are recognized at par. Individual value adjustments allow for recognizable risks.

The provisions allow for all present probable legal and constructive obligations as a result of a past event and when it is probable that an outflow of resources will be required to settle the obligation. The amount of the provisions recognized is based on the amounts required to cover future payment obligations, recognizable risks and contingent liabilities of the Group.

Interest is recognized as income or expense at the time at which they accrued.

Income taxes allow for current taxes and deferred taxes and are recognized in the income statement, unless the underlying facts are credited or charged directly to equity.

Deferred taxes are calculated using the temporary method as per IAS 12. According to that, deferred tax assets/deferred tax liabilities result from temporary differences in the amounts recognized in the tax balance sheets and the IFRS accounts (HB II), tax loss carryforwards that can be utilized, and consolidation measures.

The respective assessment bases of deferred taxes are measured at the income tax rate expected to be applicable at the date of the realization of the differences. Future deferred taxes were measured using an average tax rate of 32.275% in Germany, and the respective applicable tax rates in the USA and Great Britain.

Deferred tax assets are recognized to the extent that it is probable that future taxable profit will be available against which they can be utilized. The method for calculating deferred tax assets was not changed during the first half of 2008.

Segment reporting

The Group exclusively develops and distributes document management and archiving products. It offers the associated software maintenance and other services. Due to the homogeneous business activity and the scope of business the data in the interim consolidated financial statement is not segmented.

Risk reserve

We allow for the specific risks involved in our business through the recognition of individual value adjustments. The maximum amount of credit risk equals the amount of the receivables recognized.

Estimates used in applying accounting and valuation principles

The preparation of the interim consolidated financial statement requires estimates to be made with regard to several items which have an impact on the assets, liabilities and contingent liabilities recognized as of the respective balance sheet date as well as income and expenses of the reporting period. The actual amounts may differ from these estimates.

The Management Board has made use of accounting and valuation principles.

Information on and explanations for the balance sheet and income statement

Share capital and shares

The subscribed capital amounts to €5,403,00.00 as of June 30, 2008 and is made up of 5,403,000 no-par-value bearer shares at a computed share of €1.00 each in the subscribed capital. All shares grant the same rights.

The general meeting has authorized the Management Board to raise the company's share capital once or several times by up to €2,702 thousand against contributions in cash or in return for stock (authorized capital).

Capital reserve

The capital reserve stems from the issue of shares above par.

Minority interests

Minority interests relate to the shareholder who holds 30% of the share capital of the Austrian subsidiary EASY SOLUTIONS Archivierungs- und Informationssysteme GmbH, as well as the shareholder who holds 24% of the share capital of the British subsidiary EASY SOFTWARE (UK) PLC.

Liability

As of June 30, 2008, the following guarantees existed:

	06/30/2008
Bank guarantee in favor of EASY SOLUTIONS GmbH, Oberhausen	€400k

Annual surplus and earnings per share

Net income for the period amounts to €2.1 million (previous year: €2.8 million)

Earnings per share for the individual periods are determined in compliance with IAS 33 by dividing the consolidated profit of loss by the number of outstanding shares .

	06/30/2008	06/30/2007
Consolidated profit or loss (in € thousand)	2,118	2,765
Number of shares, half-year average (in units)	5.403.000	5.403.000
Earnings per share (in €)	0.39	0.51

Payout of dividends

The dividends paid out from our Austrian subsidiary EASY SOLUTIONS Archivierungs- und Informationssysteme GmbH amount to €70 thousand. Of these, €21 thousand goes to the minority shareholder.

EASY SOFTWARE AG
Half-year finance report 2008

- Interim Consolidated Financial Statement -

Software development costs

Capitalized software development costs include the personnel costs incurred for those employees who are solely active in software development, including the statutory contributions to social insurance to be borne by the employer, as well as directly attributable overhead and third-party development costs.

At €1.4 million, capitalized software development costs have almost doubled as compared to the previous year. This is due to the fact that as of December 31, 2007, EASY SOFTWARE AG recognized €583k as prepayments for

a third-party software development project in the assets. Since EASY SOFTWARE AG will now complete this project on its own and integration into the EASY ENTERPRISE.x product family will be enabled via an interface, this item had to be listed as expenditure in the individual financial statement of EASY SOFTWARE AG, and to be capitalized in the Group as per IFRS.

Other intangible assets

The other assets contain especially licenses and consumer bases (the latter disclosed separately as of June 30, 2007).
