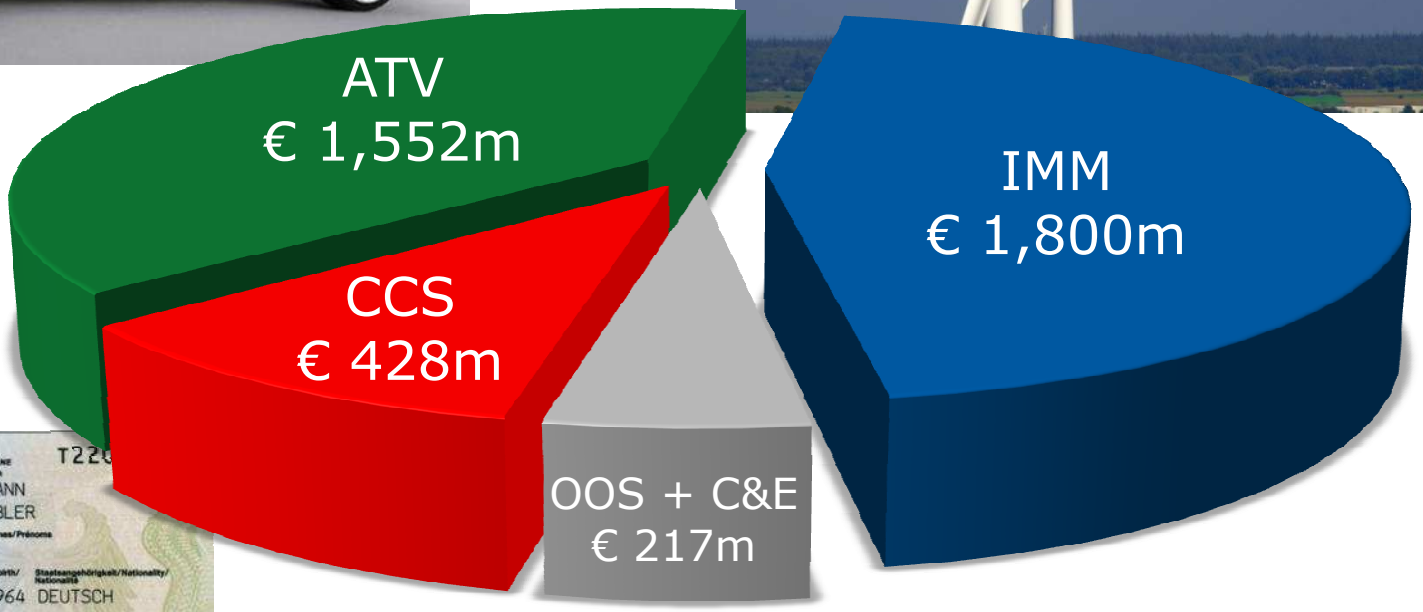
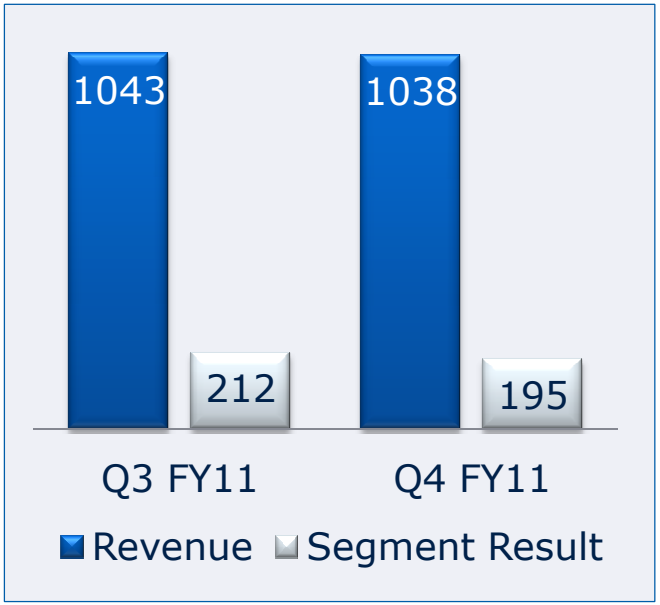
Revenue Split by Division

Full FY 2011 revenue: EUR 3,997m



Another Quarter of Solid Financial Performance



[EUR m]	Q3 FY11	Q4 FY11	FY 2011
Revenue	1,043	1,038	3,997
Total Segment Result	212	195	786
Total SR Margin	20.3%	18.8%	19.7%
Net Income*	190	125	1,119
Investment	319	273	887
FCF from cont. operations	-8	97	106
Gross Cash	2,585	2,692	2,692
Net Cash	2,246	2,387	2,387

* Net Income FY 2011 includes a book gain of EUR 352m from the sale of WLS to Intel Mobile Communications.
Net Income Q4 FY 2011 and FY 2011 include EUR 122m loss from discontinued operations, net of income taxes.

- Growth Outlook and Margin Resilience
- Results and Outlook

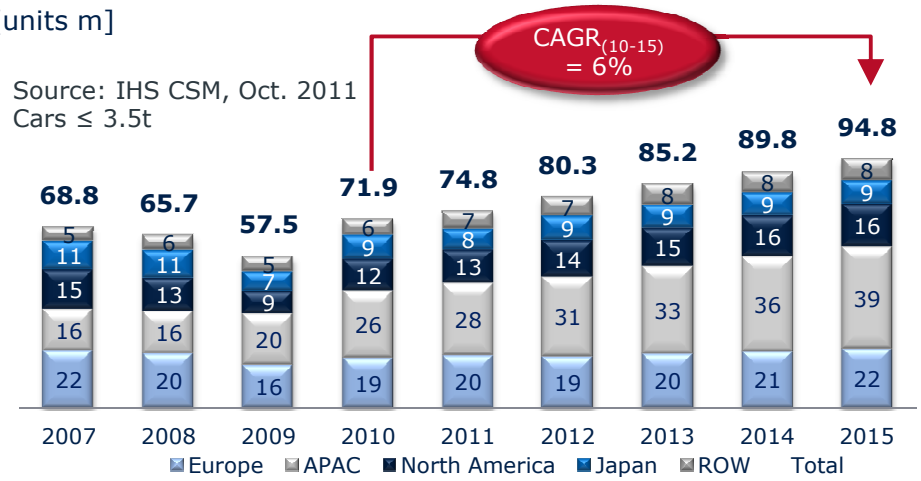
New Era: Multiple Factors Driving Demand for Power Semiconductors

'90 – '10	'10 – '30	Changes
	 Courtesy: Tesla	■ Electrification of powertrain fuels demand for high-power semis in cars and doubles silicon content.
		■ Shift towards renewable energies requires orders of magnitude more high-power semis per MW of power generated.
		■ Higher efficiency in power conversion lowers CO_2, material and electricity costs.
		■ Stronger demand for goods containing power semis due to faster increase in standard of living in BRIC countries.

Growth: Rising Global Car Production and Silicon Content Drive Market

Global car production

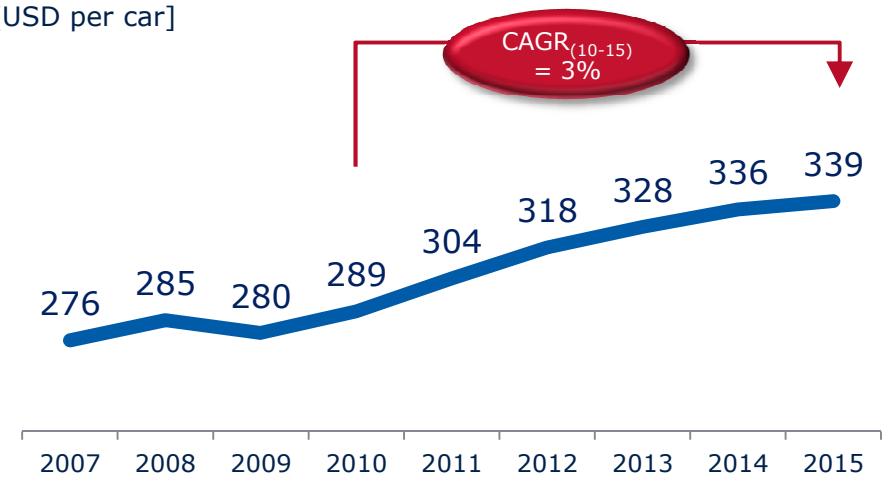
[units m]



- Highest growth in car units out of APAC.
- Semi content per car: USD 289 in 2010 versus USD 339 in 2015.
- Auto semi market growth drivers: safety, powertrain and body.

Semi value per car

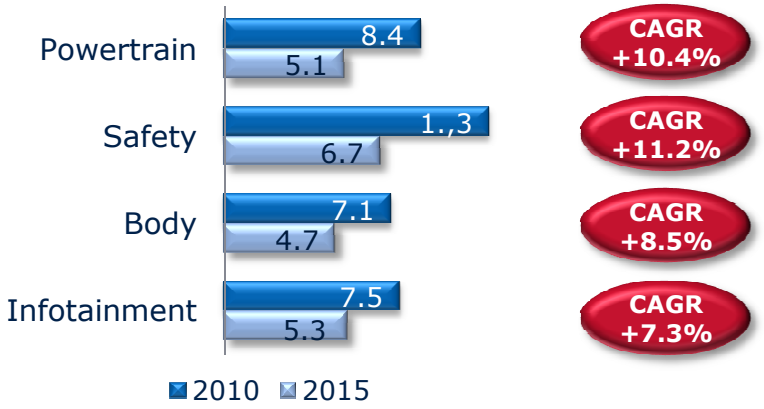
[USD per car]



Source: Strategy Analytics, Oct. 2011; includes semiconductor sensors

Semi market by segment

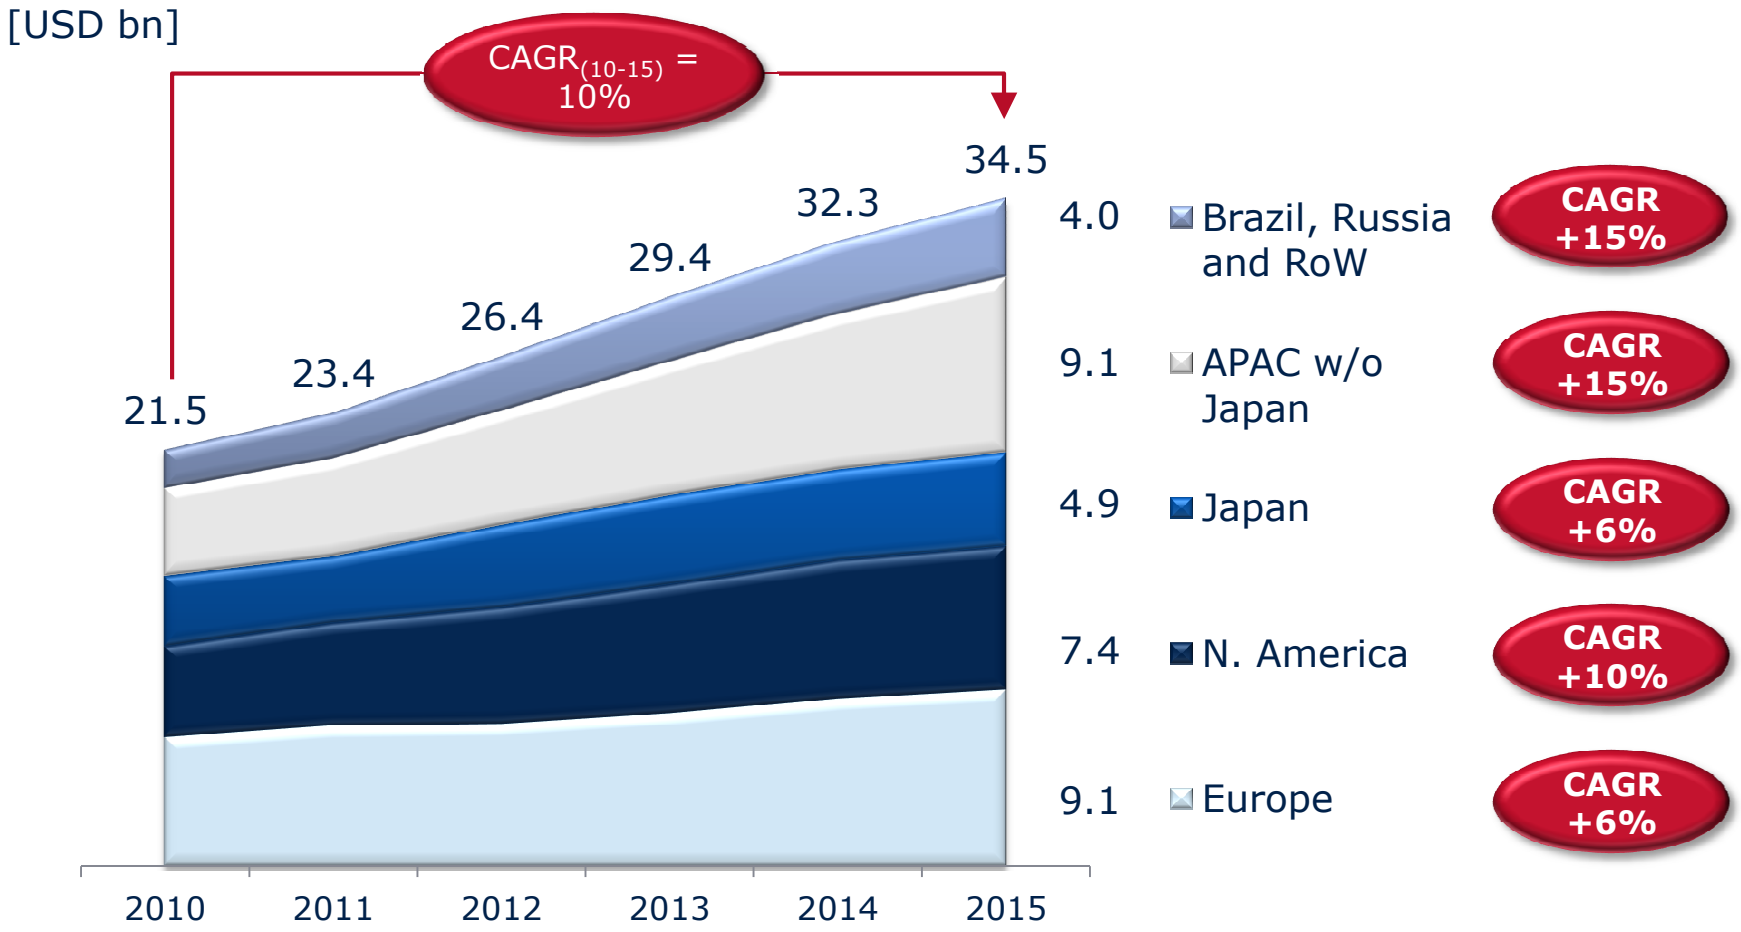
[USD bn]



Source: Strategy Analytics, Oct. 2011

By Region, Main Growth Drivers are BRIC Markets and Recovery in North America

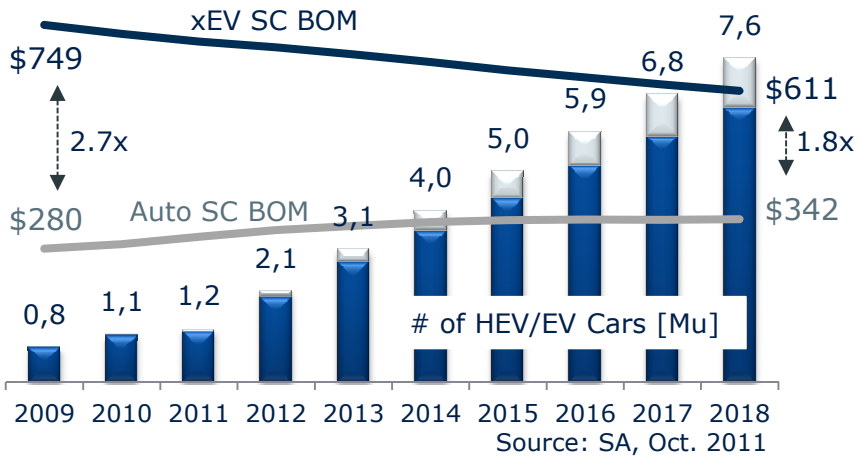
Automotive semiconductor market forecast



Source: Strategy Analytics, October 2011; includes semiconductor sensors.

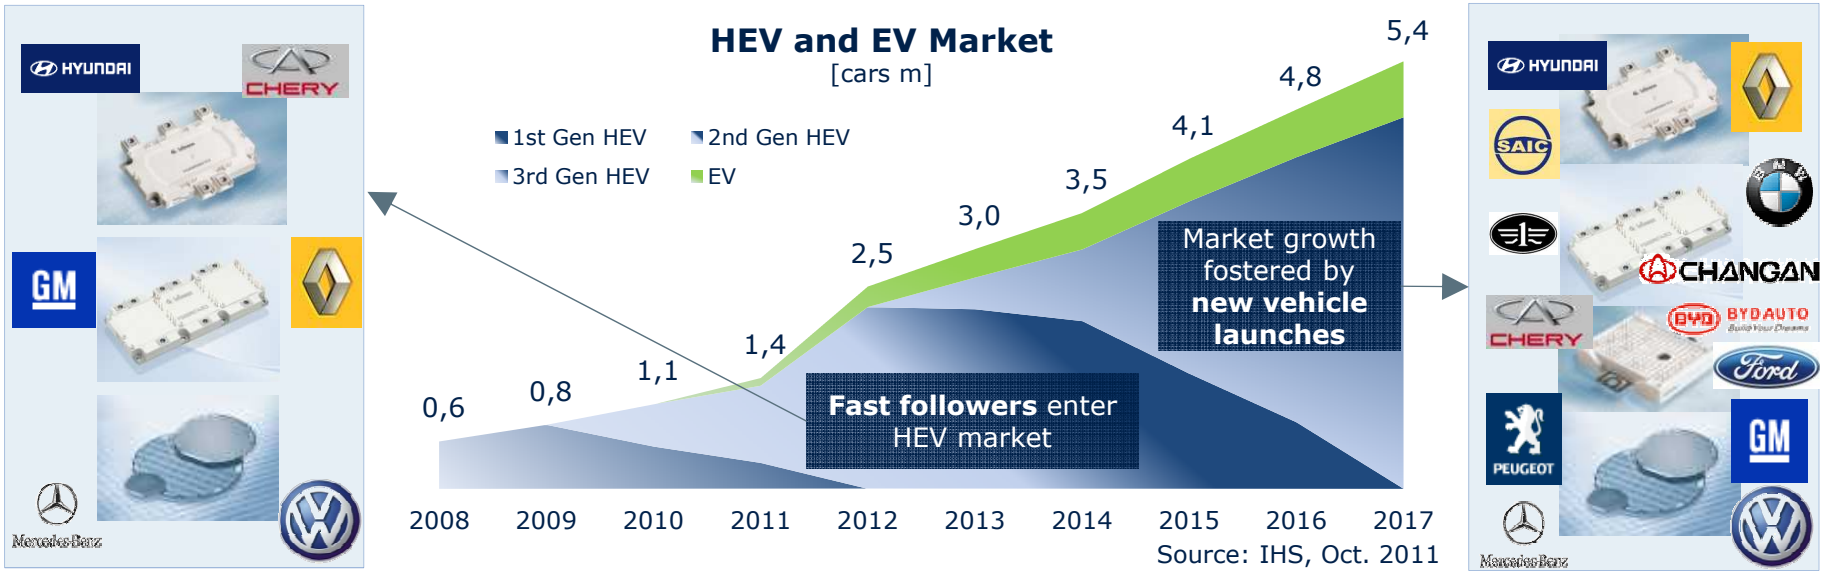
Electric Vehicles (EV) and Hybrid EVs (HEV) Drive Semiconductor Demand

ICE vs. EV/HEV Semiconductor BOM



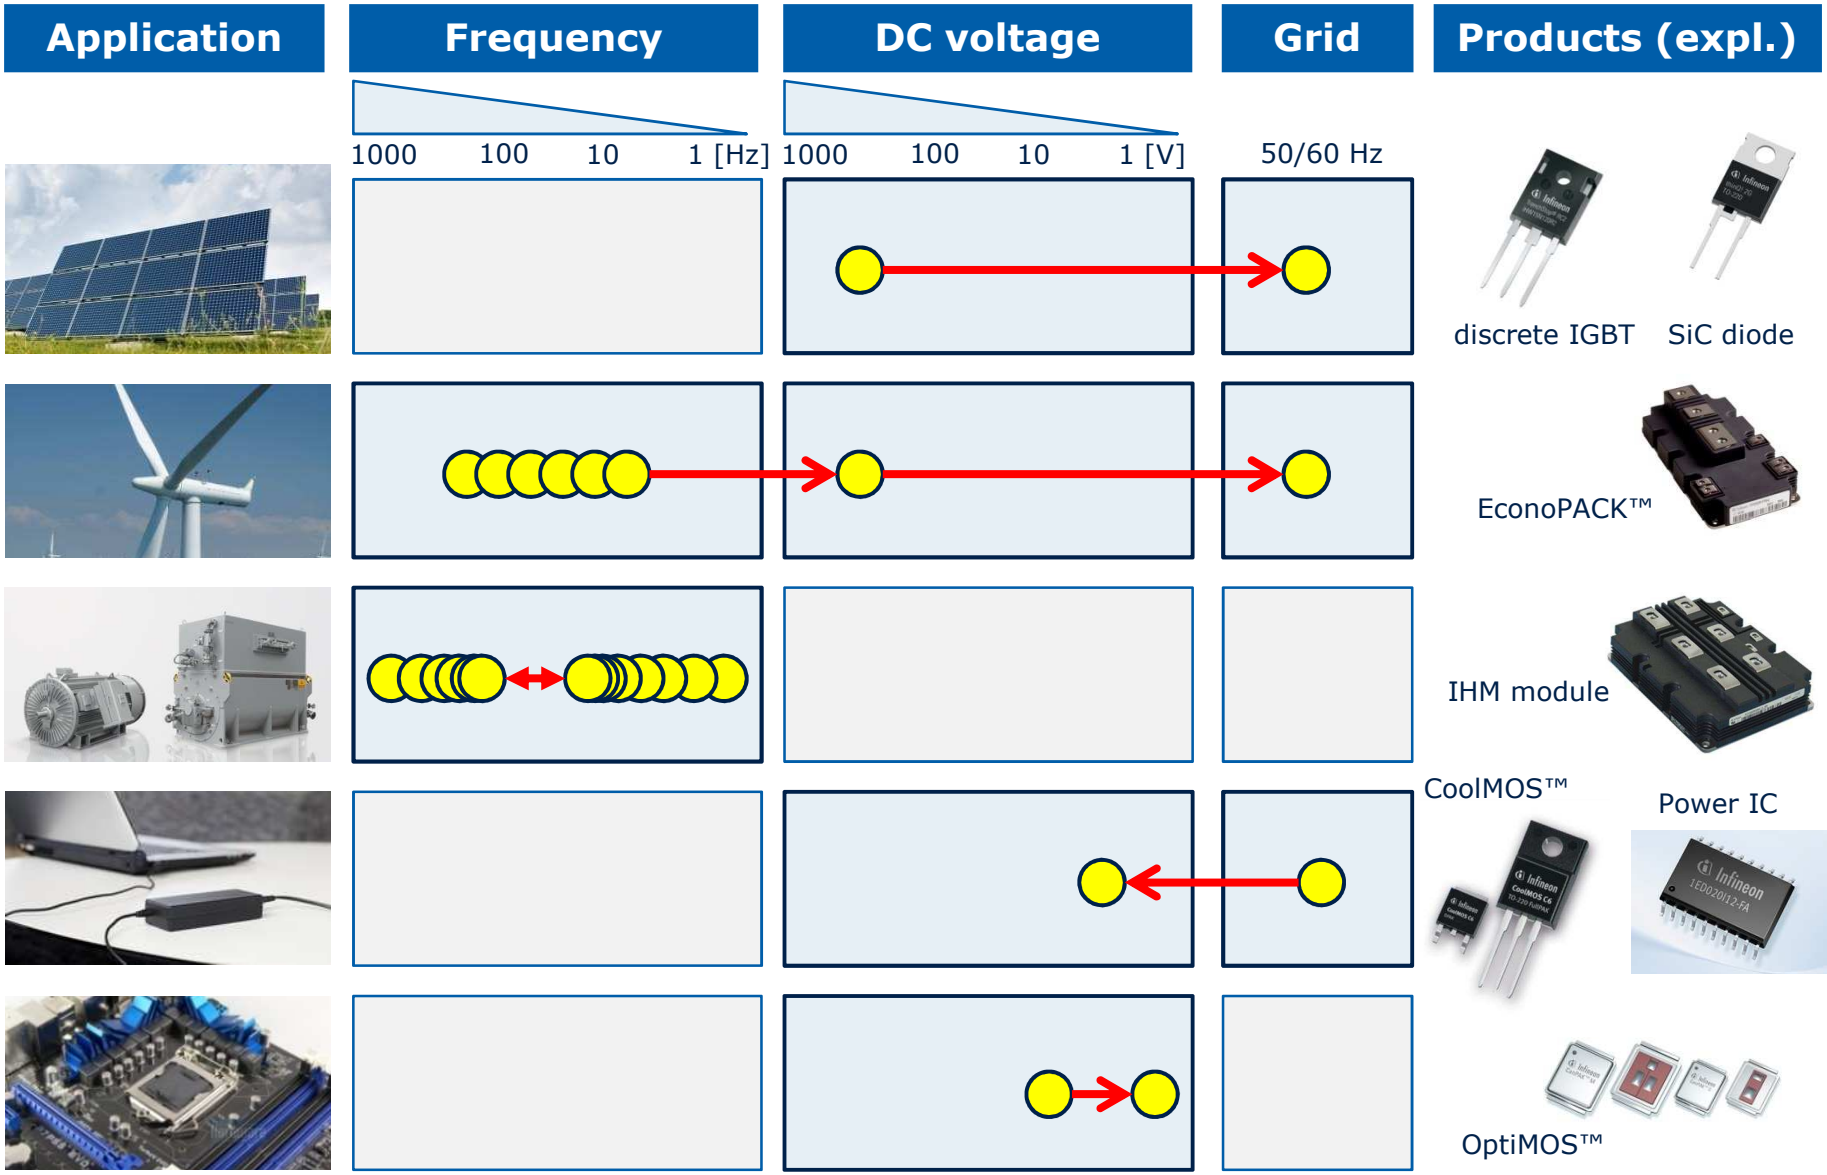
Source: SA, Oct. 2011

- Fuel cost, CO_2 reduction and price are **main drivers** for EVs and HEVs.
- Semiconductor bill-of-material of an **EV/HEV** is 2 to 3 times higher than total semiconductor bill-of-material on an ICE.
- 50-80% related to IGBT and diode chips in state-of-the-art **module packages**.



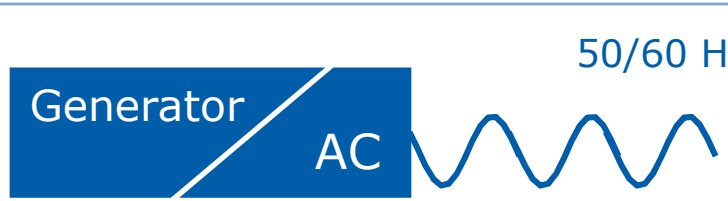
Source: IHS, Oct. 2011

Conversion of Electrical Energy



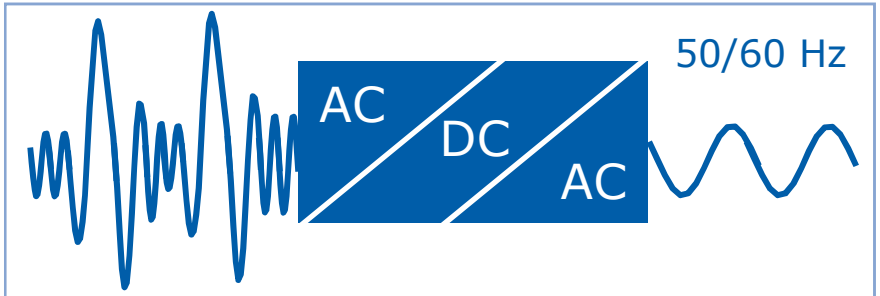
Semi Content per MW in Wind Turbines Much Higher Than in Trad. Power Plants

Nuclear plant, coal-fired plant



- No fluctuation in amplitude and frequency. Direct grid coupling possible.
- Power semiconductor content: **~ €200 per MW**.
- Semiconductors primarily used for uninterruptable power supplies.

Wind turbines



- Fluctuations in amplitude and frequency.
- Power semiconductor content:
  - **~ €3,000 per MW** for gear-based turbines;
  - **~ €9,000 per MW** for dircet conversion turbines.

Motor Drives and Traction: Focus on Efficient Power Conversion and RPM Control

Direct AC connection

AC/DC/AC conversion

- About 60% of industrial energy is used by electrical motors.
- For each $1 spent to purchase a more efficient electrical motor, $100 of energy cost can be saved during the life of such motor.
- Conventional motor drives are being replaced by intelligent inverter-based drives, saving up to 40% energy.
- AC/DC/AC conversion allows permanent control to match output with the needs.
- Power semiconductor content: **~ €5,000 per MW** or $10-100k, depending on application.

10% Growth or More p.a. Expected for Infineon

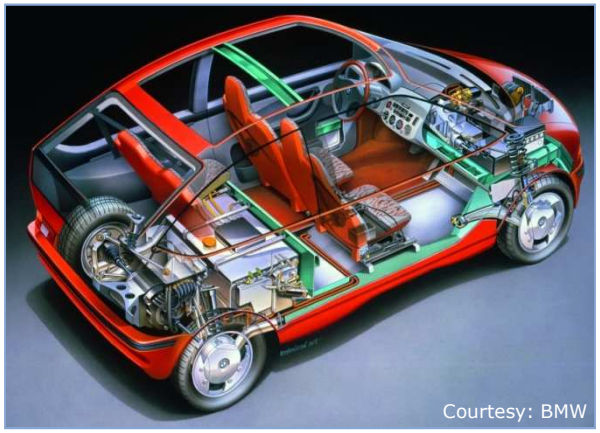
ATV	IMM	CCS
 Courtesy: Hyundai		
ATV: ~10% p.a.	IMM: > 10% p.a.	CCS: ~5-7% p.a.

Infineon: ≥ 10% p.a.

4 Reasons for Sustainable Profitability – #1: High Barriers to Entry

Long product life cycles	System knowhow and understanding	Strong quality and reliability req's

Courtesy: Siemens



Courtesy: BMW

- For many markets we address, deliveries of semis need to be ensured for very long periods of time:
  - For car industry: 7 to 24 years;
  - For train industry: about 15 years.

- Both deep and wide know-how and understanding of our customers' applications needed for making best in class solutions:
  - e.g. HEV/EV needs both automotive and industrial expertise.

- Products need to reliably perform well in the field over longer periods of time:
  - Airbag reliability required as long as the car is in use;
  - Wind turbines should function 30 years.

#2: Semiconductors – Core Enablers of Innovation and Higher Functionality

Energy Efficiency

- **Power supplies**
  More advanced power semiconductors allow smaller, denser, lighter and more efficient power supplies.
- **VSD**
  More precise and efficient RPM-control versus mechanical transmission.

Mobility

- **Recuperation**
  Implemented in trains for years; brought to cars by the advent of HEV/EVs.
- **Power steering**
  EPS is replacing hydraulic-mechanical power steering allowing more flexibility in car design and less power consumption.

Security

- **Identification**
  Chip-based passports and national ID cards allow much higher level of security compared with paper-only ID cards.
- **Brand protection**
  Chip-based authentication of accessories, e.g. batteries.

#3: Semis Represent a Negligible Part of the Value of the End Product

Example 1: mid-range car

Courtesy: Volkswagen

€25,000

Semi BoM:

€250

1.0% of product value

Example 2: high-speed train

Courtesy: Siemens

€6,000,000

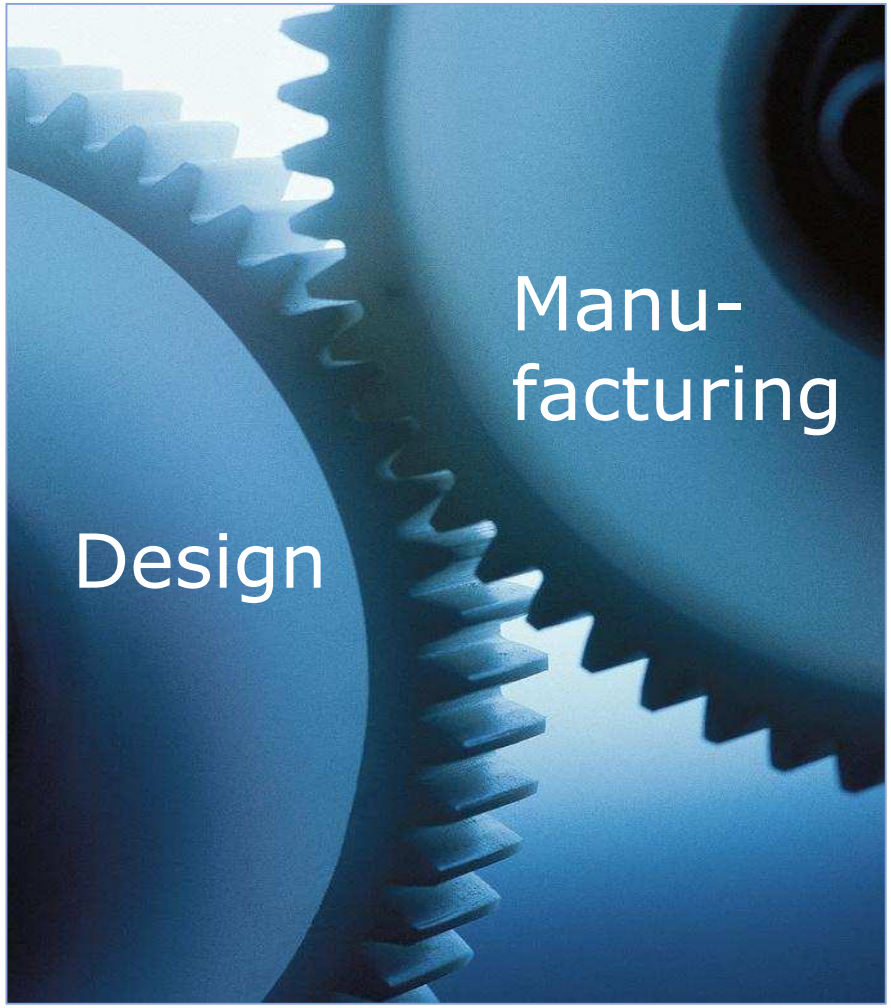
Semi BoM:

€100,000

1.7% of product value

#4: Infineon's Core Competencies – Power Semiconductors and eControl

Design and manufacturing of power semis tightly coupled



Core competence power

- Thin-wafer technology
- Super-junction MOSFETs
- Silicon-Carbide (SiC)
- IGBT module packaging

Core competence eControl

- Automotive real-time 32-bit microcontroller (TriCore™)
- Automotive 32-bit multi-core design (AURIX™)
- Low-power security controller
- Safety Guard

Sustainable Profitability: We Will Keep High Margins

#1	#2	#3	#4
High barriers to entry	**Semis enable high functio-nality**	**Value of semis small relative to end product**	**Infineon's core compe-tencies: Power and eControl**

SR target margins

ATV:	IMM:	CCS:
15–20%	**20–25%**	**10–15%**

Courtesy: Tesla

Infineon:

- **~20% under normal industry conditions**
- **~15% through cycle**

Target Operating Model

	FY 2011	FY 2012e	Longer term
Revenue	EUR 3.997bn	Decreasing by a mid single-digit %	≥ 10% growth p.a.
Gross margin	41.4%	< 40%	Flat or increasing vs FY 2012
R&D	11.0% of sales	Increasing by 5 – 10%	Low-to-mid teens % of sales
SG&A	11.2% of sales	Increasing by 5 – 10%	Low-teens % of sales
Total Segment Result margin	19.7%	Low to mid teens %	Increase vs FY 2012

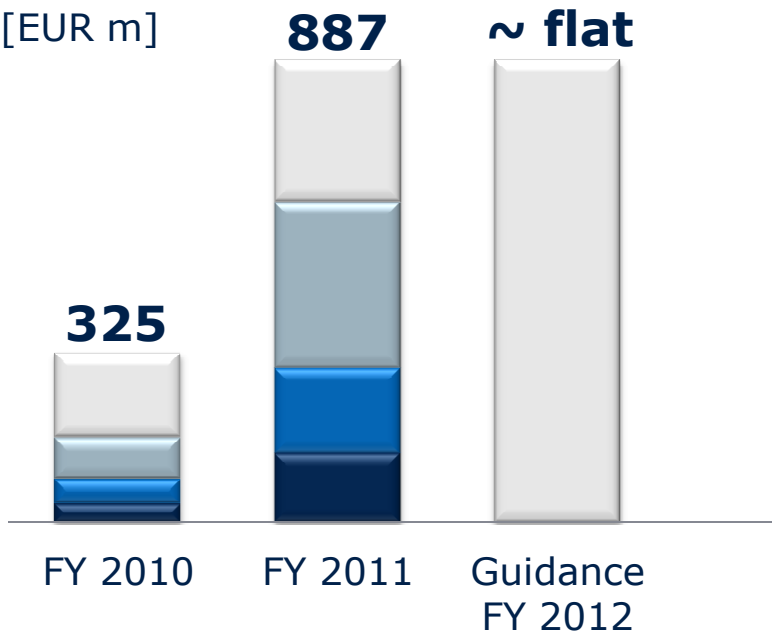
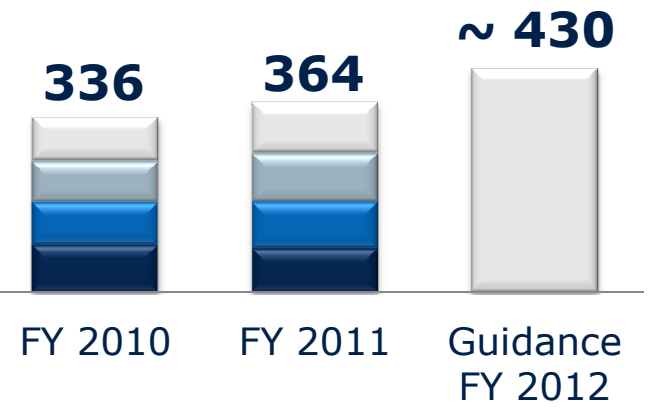
Investments Remain High to Exploit Growth Potential

Investments*



D&A



Guidance for Investments:

- FY13: below investments in FY12
- beyond FY13: 10 – 15% of sales

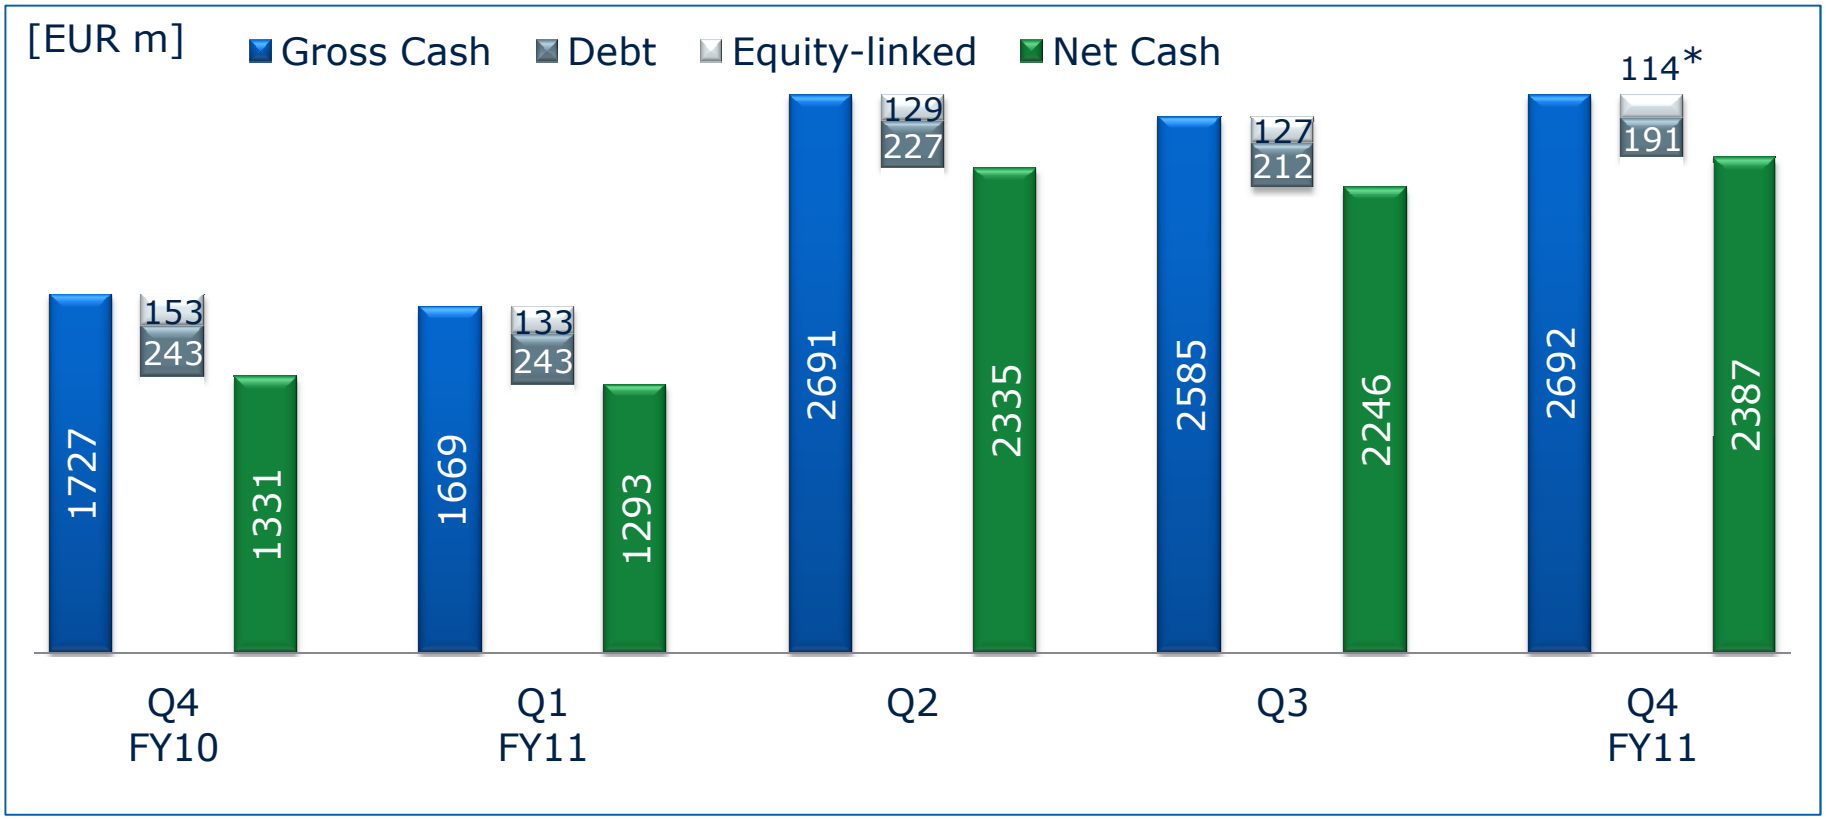
Guidance for D&A:

- FY13: increase compared to FY12
- beyond FY13: 10 – 15% of sales

* For definition please see slide 32 in appendix.

High Gross and Net Cash Position Maintained

Liquidity Development



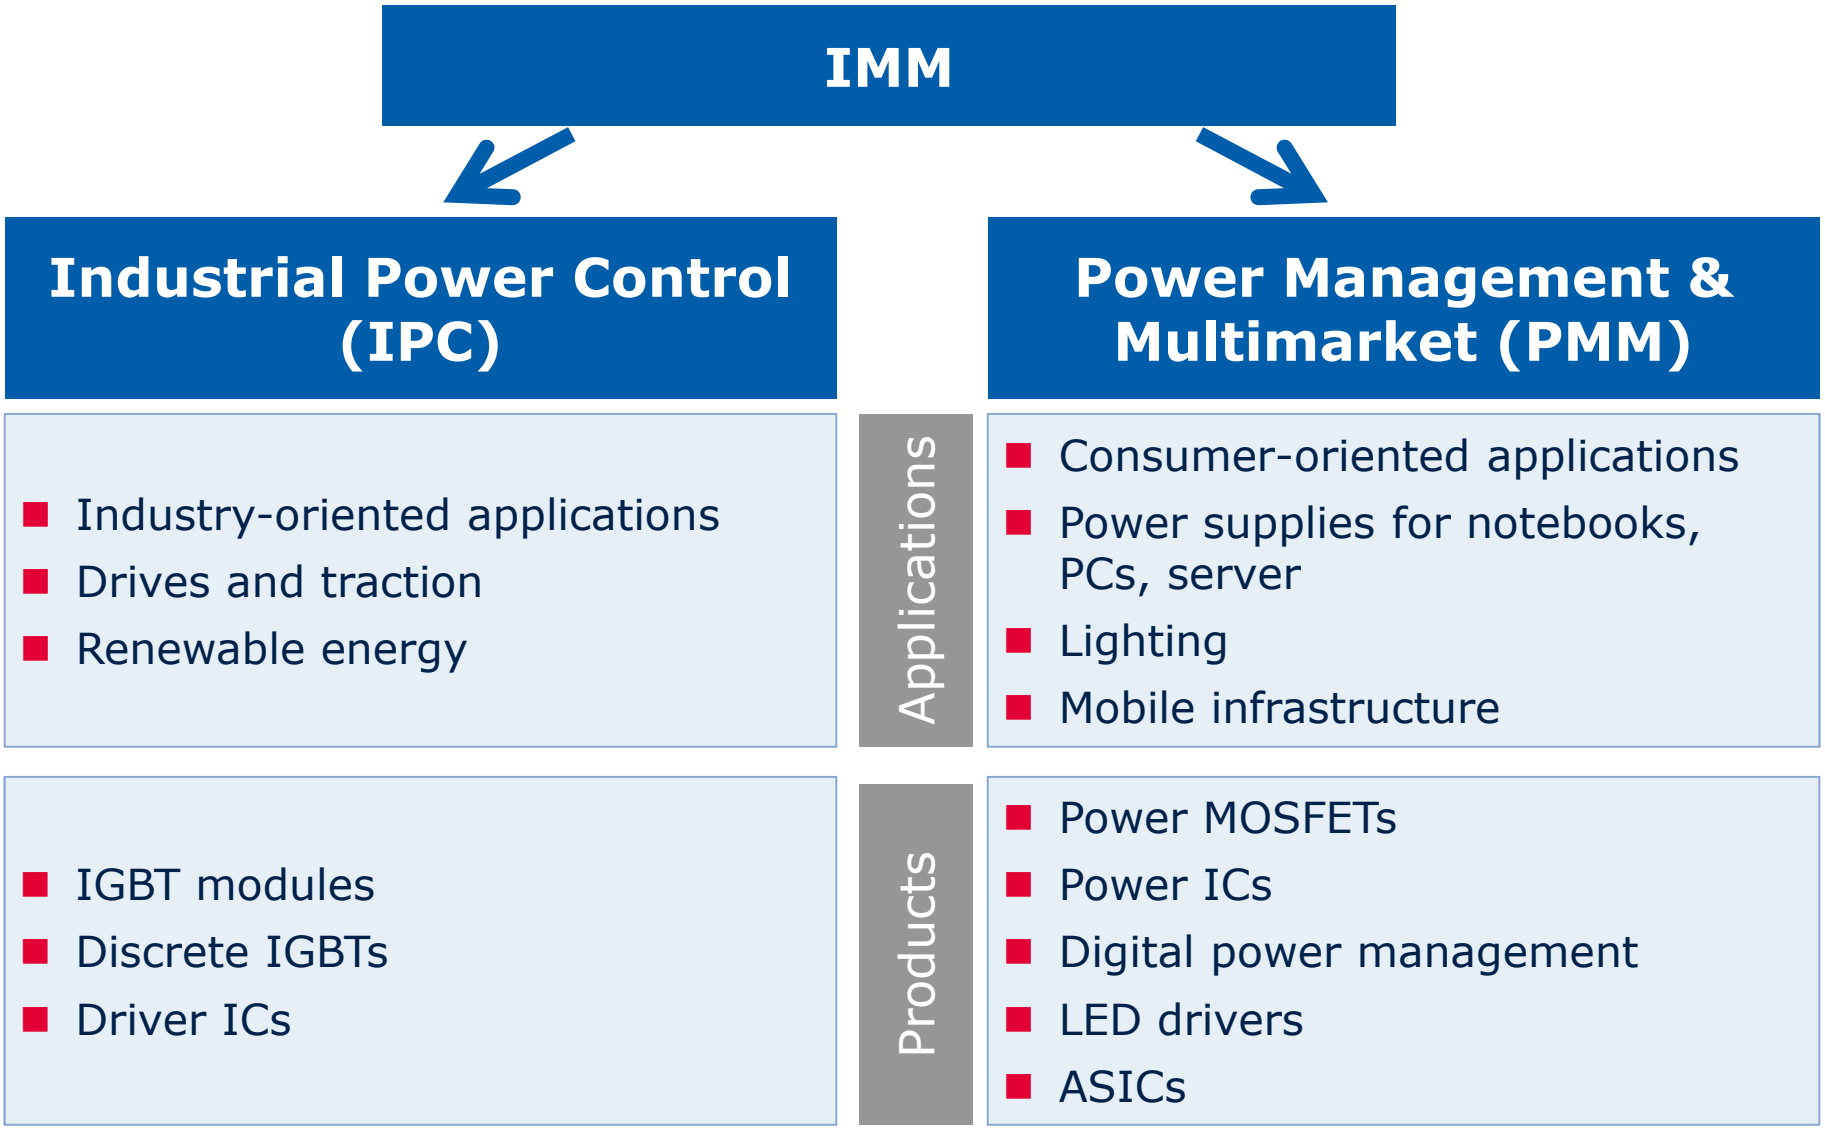
* Consists of Convertible Bond 2014 (nominal value EUR 137m; book value EUR 114m).

- Gross and net cash increased despite accelerated capital returns in Q4 FY11.
- FY 2011: Repurchases of nominal EUR 59m of CB 2014 (~26m shares underlying) and 4m shares for total of €199m in cash.

Guidance for Q1 and FY 2012

	Outlook Q1 FY12 (compared to Q4 FY11)	Outlook FY 2012 (compared to FY 2011)
Revenue	Revenue to decline by about 10%.	Mid-single digit percentage decline.
Total Segment Result Margin	13 to 14% of sales.	Low-to-mid teens percentage.

New Structure of IMM as of 1 January 2012



ENERGY EFFICIENCY
MOBILITY
SECURITY

Innovative semiconductor solutions for energy efficiency, mobility and security.

Notes

- **Investments** =
  'Purchase of property, plant and equipment'
  + 'Purchase of intangible assets and other assets' *incl. capitalization of R&D expenses*

- **Working Capital** =
  ('Total current assets'
  – 'Cash and cash equivalents'
  – 'Financial investment'
  – 'Assets classified as held for sale')
  – ('Total current liabilities'
  – 'Short term debt and current maturities of long-term debt'
  – 'Liabilities classified as held for sale')

- **DOI** (inventory days; quarter-to-date) =
  ('Net Inventories' / 'Cost of goods sold') * 90

- **DSO** (days sales outstanding; quarter-to-date) =
  ('Trade accounts receivables (net)' / 'revenue') * 90

- **DPO** (days payables outstanding; quarter-to-date) =
  ('Trade payables' / ['Cost of goods sold' + 'Purchase of property, plant and equipment']) * 90

Disclaimer

This presentation was prepared as of 16 November 2011 and is current only as of that date.

This presentation includes forward-looking statements and assumptions about the future of Infineon's business and the industry in which we operate. These include statements and assumptions relating to general economic conditions, future developments in the world semiconductor market, our ability to manage our costs and to achieve our growth targets, the resolution of Qimonda's insolvency proceedings and the liabilities we may face as a result of Qimonda's insolvency, the benefits of research and development alliances and activities, our planned levels of future investment, the introduction of new technology at our facilities, our continuing ability to offer commercially viable products, and our expected or projected future results.

These forward-looking statements are subject to a number of uncertainties, such as broader economic developments, including the market environment; trends in demand and prices for semiconductors generally and for our products in particular, as well as for the end-products, such as automobiles, drives, renewable energies and consumer electronics, that incorporate our products; the success of our development efforts, both alone and with partners; the success of our efforts to introduce new production processes at our facilities; the actions of competitors; the continued availability of adequate funds; any mergers, acquisitions or dispositions we may undertake; the outcome of antitrust investigations and litigation matters; and the resolution of Qimonda's insolvency proceedings; as well as the other factors mentioned in this presentation and those disclosed at other occasions.

As a result, Infineon's actual results could differ materially from those contained in or suggested by these forward-looking statements. You are cautioned not to place undue reliance on these forward-looking statements. Infineon does not undertake any obligation to publicly update or revise any forward-looking statements in light of developments which differ from those anticipated.
