

REA gives presentation at Global Green Growth Institute (GGGI) workshop in East Kalimantan

The focus of the GGGI workshop, which was held in Samarinda in East Kalimantan, was to highlight projects that are being undertaken within a variety of sectors to provide examples of how sustainability or 'green growth' can be incorporated within the economic development plan (MP3EI) for East Kalimantan. REA was invited to give a presentation about the group's ability to produce renewable energy by capturing the methane produced as a result of the anaerobic digestion of palm oil mill effluent (POME) and converting it to electricity. The workshop was attended by a variety of government and industry representatives.
